2. **REGIONAL PROFILE**

I. **Introduction**

More than 15 years ago, pre-eminent urban scholar David Rusk declared that the City of Baltimore, programmed by patterns of metropolitan development to house a disproportionate share of the region’s poor Blacks, was on a path of inexorable decline.\(^1\) The extreme concentration of minority poor, Rusk argued, isolates the City socially and economically from surrounding counties and has ignited “social dynamite” – a combination of ills such as high crime rates, poor education, family disintegration and dependence on welfare – that distributes fallout well beyond City borders.

The notion that urban problems belong to the City alone is outmoded. Baltimore City is the economic, cultural and functional epicenter of the metropolitan region built to surround it. For that reason, any condition that renders the City less competitive creates a drag on the viability of surrounding communities. Reinforcing the theoretical prospect that the fates of suburban counties are inextricably bound with the fate of their urban core is the very concrete fact that traditionally urban problems have begun to impact the older, more densely populated areas of the suburbs. The Greater Baltimore Committee noted in 1997 that “we can readily see that [such areas] are facing social and economic problems that we formerly associated with city neighborhoods.”\(^2\) This is demonstrated throughout the demographic and economic analysis provided in this document, in which foreclosure, vacancy and blight have encroached increasingly upon inner-ring suburban communities.

Local government boundaries are transcended by many issues of planning and community development – housing market trends, transportation networks, environmental concerns and the spread of poverty, to name a few. The metropolitan region has emerged as a more practical unit of measurement in handling these issues. Communities that understand themselves as partners in advancing the success of the entire region are better positioned for sustainable positive outcomes than communities that regard their neighbors as competitors. In regions where jurisdictions compete for revenue-generating high-value housing and commercial development and limit the type of sites that are less likely to bolster the municipal bottom line (for instance, affordable housing for lower-income populations with greater service needs), economic disparity across the region weakens the entire region.

Regional governance can be understood as a system built to respond to circumstantial change. It ranges in implementation from extremely informal exercises in intergovernmental cooperation to drastic border changes, such as annexation or

---

consolidation to achieve regional goals.\(^3\) Thus far, fair housing efforts in the Baltimore region can be characterized only as loosely cooperative. The City of Baltimore and the outlying counties of Anne Arundel, Baltimore, Harford and Howard have jointly completed plans to affirmatively further fair housing since the 1996 Regional Analysis of Impediments to Fair Housing Choice, but the implementation of fair housing activities has occurred on a fragmented basis, with each community working toward achieving its own set of goals. At this point, while major impediments continue to limit fair housing choice in the Baltimore metropolitan area, no system exists for the implementation of meaningful regional fair housing solutions.

Those may come in the final remedies of *Thompson v. HUD*, the landmark desegregation case to determine whether the U.S. Department of Housing and Urban Development acted unlawfully by failing to affirmatively desegregate Baltimore City public housing. In 2005, Federal District Judge Marvin J. Garbis found HUD liable for failing to implement a regional strategy for desegregation and the deconcentration of poverty in Baltimore, explaining that the City “should not be viewed as an island reservation for use as a container for all of the poor of a contiguous region.” Garbis’ decision emphasizes the need for regional solutions, concluding that the City of Baltimore and its housing authority did not have the option of investing resources to expand the supply of affordable housing units outside city limits. The next phase of the case involves the creation of a remedy that is acceptable to HUD, the plaintiffs and the court. Based on the 2005 findings of the case and expert testimony that has been presented since on the range of potential remedial actions, the court-imposed remedy is expected to introduce more heavily structured regional governance to housing-related activities in the Baltimore area.

In the absence of centralized control imposed by state or federal governing bodies, responsibility rests with each of the jurisdictions participating in the AI to devise and implement methods of collectively addressing patterns of racial and economic segregation.

---

\(^3\) In *The Regional Governing of Metropolitan America* (Westview Press, 2002), David Y. Miller defines four types of metropolitan regionalism along this scale: coordinating, administrative, fiscal and structural.
II. Regional Overview

This section of the AI presents a demographics overview of the Baltimore region. Trends in population, households, housing, income and employment are summarized for the region as a whole with comparisons made among the five AI jurisdictions – Anne Arundel County, Baltimore County, the City of Baltimore, Harford County and Howard County – where appropriate. Following this section are individual AIs for each jurisdiction, all of which include a list of impediments to fair housing choice and a fair housing action plan to be undertaken by each respective jurisdiction. A regional fair housing action plan, which addresses issues such as public transportation, housing accessibility and real estate advertising, is included at the end of the document. The list of regionally-based actions will require collaborative undertaking by all five jurisdictions.

III. Demographic Profile

a. Population Trends

The population across the five jurisdictions comprising the Baltimore region has increased steadily in recent decades, growing 17% between 1980 and 2008. The fastest growth occurred during the 1980s, when the region’s population increased 7.5%. Growth has slowed since then, with the regional population increasing only 3.5% between 2000 and 2008.

As shown in Figure 2-1, Howard County experienced the most rapid growth among AI jurisdictions, with a population more than doubling from 118,572 in 1980 to 247,995 in 2008. On the other hand, the City of Baltimore lost 150,000 residents (19%), the majority of whom were White. The City’s White population decreased 41.1% during this period. The City’s sustained and substantial loss in numbers, in light of population growth in all surrounding counties, illustrates the extent to which the region’s urban core has emptied into its suburbs.

White flight characterized the City’s population loss in the decades following 1950, when the White population fell by more than 435,000 while the Black population grew by 210,000.4 A central cause of White flight in the Baltimore region was the expansion of suburban living opportunities for those who could afford them, facilitated by the construction of new highways and the policies of the Federal Housing Administration (FHA) mortgage insurance program, which guaranteed home loans only in “low risk” areas, typically, low-density, predominantly White suburban neighborhoods. In recent years, this trend has stabilized, leaving behind in Baltimore what some researchers speculate is a core number of White residents who prefer urban living.5

5 Ibid.
The region has become increasingly diverse since 1990. Whereas the non-White population accounted for 30.3% of the population in 1990, by 2008 this had increased to 39.3%. The region’s overall White population decreased slightly during those years (3.1%), with losses in the City and Baltimore County balanced by gains totaling 14.4% across Anne Arundel, Harford and Howard counties.

Among non-White residents, Blacks continue to comprise the largest racial group. However, the largest population growth has been among Asian/Pacific Islanders and persons of all other races. The Asian/Pacific Islander increased by almost 60,000 residents, or 173.6%, and persons of all other races tripled from 24,920 to 78,809.

The Hispanic population experienced the most rapid growth of all minority groups from 1990 to 2008. In 1990, there were less than 25,000 Hispanic residents in the region, accounting for 1.1% of the total population. By 2008, this number had nearly quadrupled to 84,000, constituting 3.5% of the region’s population.

---

**OBSERVATION:** Since 1990, the non-White population across the Baltimore metropolitan region, defined as the City and the four counties covered by this report, has increased from 30.3% to 39.3% of the total population. Diversity has increased within the minority population, with the proportion of non-Black racial and ethnic minorities expanding steadily.

---

**b. Areas of Racial and Ethnic Minority Concentration**

This AI defines areas of racial or ethnic minority concentration as census tracts in which the percentage of a specific minority or ethnic group is 10 percentage points higher than across the jurisdiction overall. Within each of the five jurisdictions, the threshold for determining an area of concentration is different because the percentage of Blacks, Asians and Hispanics differs for each.

For example, areas of concentration of Black residents in Anne Arundel County include census tracts where the percentage of Blacks was 24.9% and higher, while in Baltimore City, the threshold is 71.7%. Figure 2-4 lists the thresholds for the primary minority groups in each of the five jurisdictions.
Some census tracts in each jurisdiction qualified as areas of Black and/or Hispanic concentration. Three jurisdictions (Baltimore City and the counties of Baltimore and Howard) also had concentrations of Asian residents. The regional map on the following page depicts the locations of minority concentrations.

**Observation:** Areas of racial and/or ethnic concentration occur in each entitlement jurisdiction. The highest number and proportion of concentrated tracts are found in the City of Baltimore.

c. **Residential Segregation Patterns**

Residential segregation is a measure of the degree of separation of racial or ethnic groups living in a neighborhood or community. Typically, the pattern of residential segregation involves the existence of predominantly homogenous, White suburban communities and low-income minority inner-city neighborhoods. A potential impediment to fair housing is created where either latent factors, such as attitudes, or overt factors, such as real estate practices, limit the range of housing opportunities for minorities. A lack of racial or ethnic integration in a community creates other problems, such as reinforcing prejudicial attitudes and behaviors, narrowing opportunities for interaction, and reducing the degree to which community life is considered harmonious. Areas of extreme minority isolation often experience poverty and social problems at rates that are disproportionately high. Racial segregation has been linked to diminished employment prospects, poor educational attainment, increased infant and adult mortality rates and increased homicide rates.

The distribution of racial or ethnic groups across a geographic area can be analyzed using an index of dissimilarity. This method allows for comparisons between subpopulations, indicating how much one group is spatially separated from another within a community. The index of
dissimilarity is rated on a scale from 0 to 100, in which a score of 0 corresponds to perfect integration and a score of 100 represents total segregation. The index is typically interpreted as the percentage of the minority population (in this instance, the Black population) that would have to move in order for a community or neighborhood to achieve full integration. A dissimilarity index of less than 30 indicates a low degree of segregation, while values between 30 and 60 indicate moderate segregation, and values above 60 indicate high segregation.

Overall, the Baltimore region was moderately segregated in 2000. Howard County had the lowest dissimilarity index of 36.2. Anne Arundel and Harford Counties and the City of Baltimore were more segregated, with dissimilarity indices around 50. Baltimore County had the highest dissimilarity index of 64.9, making it highly segregated. According to this data, 64.9% of Blacks would have to move elsewhere within Baltimore County in order to achieve full integration.

Source: CensusScope & U.S. Census 2000

**OBSERVATION:** Overall, the Baltimore region was moderately segregated in 2000. Among participating jurisdictions, Baltimore County was determined to be the most segregated, with a dissimilarity index of 64.9 among Black residents and White residents.

d. **Persons with Limited English Proficiency**

Persons with limited English proficiency (LEP), including immigrants, may encounter obstacles to fair housing by virtue of language and cultural barriers within their new environment. To assist these individuals, it is important that a community recognizes their presence and the potential for discrimination, whether intentional or inadvertent, and establishes policies to eliminate barriers.

---

6 The index of dissimilarity is a commonly used demographic tool for measuring inequality. For a given geographic area, the index is equal to \( \frac{1}{2} \sum \text{ABS} [(b/B)-(A/a)] \), where \( b \) is the subgroup population of a census tract, \( B \) is the total subgroup population in a city, \( a \) is the majority population of a census tract, and \( A \) is the total majority population in the city. \( \text{ABS} \) refers to the absolute value of the calculation that follows.
In 2008, the Census Bureau reported that 89,991 persons in the Baltimore region spoke English less than “very well,” representing 3.9% of the region’s total population. Howard County had the highest proportion of persons with LEP, with 7.2% of the County’s population speaking English less than “very well.”

*Note: Data for Baltimore-Towson Census Metropolitan Statistical Area includes the five jurisdictions plus additional areas. Source: 2006-2008 American Community Survey (B16001)*

**OBSERVATION:** Across the region, there were more than 32,000 Spanish-speaking households that reported a limited ability to speak and understand English, in addition to other limited-English language groups of considerable size. Each jurisdiction is responsible to determine whether the language needs of its target population served are being met in the administration of government programs.
IV. Economic Profile

a. Race/Ethnicity and Income

Household income is one of several factors used to determine a household’s eligibility for a home mortgage loan. In 2008, median household income (MHI) for the Baltimore-Towson MSA was $66,122. As Figure 2-6 shows, MHI and poverty rates were highly variable in the region. Within the City of Baltimore, MHI was $39,083, less than half that of Howard and Anne Arundel counties. Additionally, the poverty rate in the City was four times as great as it was in those counties. Harford and Baltimore counties also had higher MHI and lower poverty rates than the City of Baltimore.

*The poverty rates for Asians and/or Hispanics were not available

A review of median household income reveals a stark contrast among racial and ethnic groups across the Baltimore region. On average, the MHI of Black households in 2008 was more than $20,000 less than that of Whites. The disparity is greatest in Baltimore City, where MHI for Blacks is equivalent to only 61.2% of that for Whites. In Baltimore County, the disparity of earnings among Blacks and Whites was the smallest, with Blacks earning the equivalent of 83.7% MHI for Whites. Across the region, minorities were significantly more likely to live in poverty.

Figure 2-9 details the income distribution of White and Black households throughout the region. Sample sizes for Asians and Hispanics were too small to analyze in several jurisdictions. Black households were relatively evenly dispersed across different income levels, and as many households

---

7 The Census-designated Metropolitan Statistical Area includes the five jurisdictions in the study area as well as Carroll County, Queen Anne’s County and the City of Towson.
earned less than $25,000 annually as those that earned more than $75,000. White households, on the other hand, were far more likely to fall in the highest income bracket. Half of White households earned more than $75,000, compared to the 13.5% of White households that earned less than $25,000.

### Figure 2-10
**Household Income Distribution by Race, 2008**

OBSERVATION: The median household income for Blacks and Hispanics in each participating jurisdiction is significantly lower than for Whites and Asians. This situation limits housing choice for Blacks and Hispanics.
b. Concentrations of LMI Persons

The CDBG program includes a statutory requirement that at least 70% of the funds invested benefit low- and moderate-income (LMI) persons. As a result, HUD provides the percentage of LMI persons in each census block group for entitlement communities such as the five covered in this AI. The following table shows the total number of LMI persons in the region and in each of the five jurisdictions. Reflecting the MHI trends discussed earlier, the percentage of LMI persons was highest in the City of Baltimore. In 2009, almost two-thirds of the City’s residents were considered LMI. This was about twice as great as the proportion of LMI persons in the four counties. The concentration of LMI persons was lowest in Howard County, where one in five persons was considered LMI.

</tbody>
</table>

*Excludes the City of Annapolis

OBSERVATION: As of 2010, 41.5% of households across the region qualified as low- and moderate-income by HUD standards. The location of LMI areas is generally highly correlated with areas of racial concentration.

c. Disability and Income

The Census Bureau reports disability status for non-institutionalized disabled persons age 5 and over. As defined by the Census Bureau, a disability is a long-lasting physical, mental or emotional condition that can make it difficult for a person to do activities such as walking, climbing stairs, dressing, bathing, learning or remembering. This condition can also impede a person from being able to go outside the home alone or to work at a job or business.

The Fair Housing Act prohibits discrimination based on physical, mental, or emotional handicap, provided reasonable accommodation can be made. Reasonable accommodation may include changes to address the needs of disabled persons, including adaptive structural (e.g., constructing an
entrance ramp) or administrative changes (e.g., permitting the use of a
service animal).

In the Baltimore region, 407,600 persons ages five and older reported a
disability in 2000, representing 19.4% of the population. In Baltimore City,
27.5% of persons reported a disability.

According to the National Organization on Disabilities, a significant
income gap exists for persons with disabilities, given their lower rate of
employment. In the Baltimore region, persons with disabilities were much
more likely than persons without disabilities to live in poverty. In 2000,
among all persons with a disability in the Baltimore region, 16.7% lived
below the level of poverty, compared to 8.4% of persons without a
disability.

**OBSERVATION:** The percentage of persons with a disability living in
poverty was higher than that for persons without a disability. Across the
region, 16.7% of persons with disabilities were living in poverty, compared
to 8.4% of persons without a disability.
d. Familial Status and Income

The Census Bureau divides households into family and non-family households. Family households are married couple families with or without children, single-parent families and other families made up of related persons. Non-family households are either single persons living alone, or two or more non-related persons living together.

Women have protection under Title VIII of the Civil Rights Act of 1968 against discrimination in housing. Protection for families with children was added in the 1988 amendments to Title VIII. Except in limited circumstances involving elderly housing and owner-occupied buildings of one to four units, it is unlawful to refuse to rent or sell to families with children.

The total number of households in the region increased 8.3% between 1990 and 2008, while family households increased at a slower rate of 1.8%. The number of female-headed households increased 4.6%, while the number of female-headed households with children decreased slightly. At the same time, married couple families remained relatively stable, while the number of married couples with children decreased 5%. Male-headed households with children increased at roughly the same rate as all households and comprised 1.9% of all households in 2008.

Sources: U.S. Census Bureau, 1990 (SFT-3, P019), Census 2000 (SF-3, P10); 2008 American Community Survey (B11005)

Female-headed households with children often experience difficulty in obtaining housing, primarily as a result of lower incomes and the unwillingness of landlords to rent their units to families with children. In the Baltimore region in 2008, 22.8% of female-headed households with children were living in poverty, compared to 2.5% of married households.
with children and 14.3% of male-headed households which children. Although females raising children comprised only 14.9% of the total number of families in the Baltimore, they accounted for 54% of all families living in poverty.

**OBSERVATION:** Female-headed households with children accounted for more than half of families living below the level of poverty across the region in 2000, despite representing less than 15% of all households.

e. **Ancestry and Income**

It is illegal to refuse the right to housing based on place of birth or ancestry. Census data in 2008 on native and foreign-born populations reveal that 8% of residents of the Baltimore region were foreign-born. The highest concentrations of foreign-born residents were in Baltimore County and Howard County, where 9.3% and 16.1% of residents, respectively, were born outside of the U.S. Baltimore City and Harford County had the lowest proportions of foreign born residents, at 5.9% and 4.5%, respectively.

Throughout the region, families with children who were living with at least one foreign-born parent were about as likely to be living below 200% of the poverty level as families with children of native parents. However, this varied throughout the region. In Harford and Howard Counties, families with at least one foreign-born parent were twice as likely to have incomes less than 200% of the poverty level, as seen in Figure 2-16. In Baltimore City, however, families with only native-born parents were more likely to fall into this lower income category.

### Protected Class Status and Unemployment

Overall unemployment in the Baltimore region was 5.7% in 2008, which was roughly on par with Maryland’s statewide rate of 5.4%. Blacks in the region were more than twice as likely as Whites to be unemployed, with rates of 9.8% and 4%, respectively. Blacks in the Baltimore region also had a higher unemployment rate than Blacks throughout Maryland.

V. Housing Market Profile

a. Housing Inventory

More than 150,000 housing units were added to the housing inventory in the Baltimore region between 1990 and 2009, representing a growth rate of 17.4%. About two-thirds of this growth was in Anne Arundel and Baltimore counties. Both counties experienced a housing stock increase of nearly 50,000 units. Harford and Howard counties had the largest proportional increase in housing stock, reflecting the population growth in those areas during this period.

Baltimore City was the only jurisdiction in which a net loss in housing units occurred. Between 1990 and 2009, the City’s inventory fell by nearly 10,000 units.

Source: DemographicsNow

OBSERVATION: There has been a 17.4% net gain in housing units across the region since 1990. The strongest gains were reported in Howard County and Harford County, which experienced increases nearing 50%. While the number of units in each county grew, the City lost nearly 10,000 units, or 3.2% of its total inventory.

b. Types of Housing Units

Of the 951,331 structures in the Baltimore region in 2000, 72.4% were single-family units and 26.3% were multi-family units. Mobile homes accounted for 1.2% of the region’s housing stock. Anne Arundel County had the highest proportion of single-family units, which comprised 82.7% of all of its housing.

Baltimore City had the highest number of multi-family structures, as they constituted 34.8% of all City housing stock. Among all the multi-family units in the Baltimore region, 41.7% were located within the City of Baltimore.

Source: U.S. Census Bureau, Census 2000 (SF 3, H30)
Foreclosure activity is related to fair housing to the extent that it is disproportionately dispersed, both geographically and among members of the protected classes. Concentrated foreclosures and residential vacancy threaten the viability of neighborhoods as well as the ability of families to maintain housing and build wealth. The propensity of lenders to target high-risk borrowers for expensive loans has had a larger impact on minority households than on White households in the Baltimore region. Households carrying heavy cost burdens are prime candidates for mortgage delinquency and foreclosure. Foreclosure also places additional stress on the rental housing market, as displaced homeowners seek affordable apartments.

According to HUD NSP foreclosure estimates released in October 2008, Maryland had an overall foreclosure rate of 3.3%. On the whole, the Baltimore region had a slightly lower foreclosure rate of 3%. Baltimore City had the highest foreclosure rate, 5.4%, followed by Baltimore County, which had a rate of 3.2%. In Howard County, the foreclosure rate was only 1.4%.

Source: HUD NSP Estimates, released October 2008

OBSERVATION: During the period of foreclosure actions studied, the Baltimore region experienced a foreclosure rate of 3%, slightly lower than the statewide rate of 3.3%. The highest rate of 5.4% occurred in Baltimore City, while the lowest, 1.4%, occurred in Howard County.

---

9 HUD NSP estimates data, covering the period between January 2007 and June 2008, is not an exact count, but distributes the results of a national survey across geographic areas according to a model considering rates of metropolitan area home value decline, unemployment and high-cost mortgages.
d. **Protected Class Status and Homeownership**

The value in home ownership lies in the accumulation of wealth as the owner’s share of equity increases with the property’s value. Paying a monthly mortgage instead of rent is an investment in an asset that is likely to appreciate. According to one study, “a family that puts 5 percent down to buy a house will earn a 100% return on the investment every time the house appreciates 5 percent.”

In 2000, Whites had the highest rate of home ownership in the region at 74.5%. Asians had the second-highest rate at 54.7%. Blacks and Hispanics had much lower rates of 47.2% and 48%, respectively.

Figure 2-21 details the home ownership rates by race and ethnicity throughout the region. Home ownership varied across the jurisdictions. For example, in Baltimore City, 29.8% of Asians owned their home, compared to 72.5% in Harford County. However, in all of the jurisdictions, home ownership was highest among White residents. Several factors impact the rate of home ownership in a jurisdiction, including income, the size of the owner housing stock compared to the rental housing stock, the cost of housing and the presence of transient populations such as college students and military households.

**OBSERVATION:** Blacks and Hispanics are more likely to be renters than to own homes across the Baltimore region.

---

e. The Tendency of the Protected Classes to Live in Larger Households

Larger families may be at risk for housing discrimination on the basis of race or the presence of children (familial status). A larger household, whether or not children are present, can raise fair housing concerns. If a jurisdiction has policies or programs that restrict the number of persons that can live together in a single housing unit, and members of the protected classes need more bedrooms to accommodate their larger household, a fair housing concern exists because restrictions on the size of the unit have a negative impact on members of the protected classes.

In the Baltimore region, minorities were more likely than Whites to live in families with three or more persons. Hispanics households had the highest proportion of large families, followed by Asian and Black households. Across the five AI jurisdictions, Baltimore County had the lowest proportion of larger families for all racial and ethnic groups.

Source: U.S. Census Bureau, Census 2000 (SF 4, PCT17)

To adequately house larger families, a sufficient supply of larger dwelling units consisting of three or more bedrooms is necessary. Across the Baltimore region, 25.7% of the rental housing stock contained three or more bedrooms, compared to 82% of the owner housing stock. By jurisdiction, the inventory of larger rental units varied. Anne Arundel County had the highest proportion of three-bedroom rental units (37.7%), which was twice that of Baltimore County (18.5%).

*Excludes City of Annapolis

Source: U.S. Census Bureau, Census 2000 (SF 3, H42)

**OBSERVATION:** Across the region, only 25.7% of renter-occupied housing stock in 2009 contained three or more bedrooms, compared to 82% of the owner-occupied housing stock. A recent rise in non-family and one-person households indicates an increased general demand for smaller units. However, participating jurisdictions must continue to monitor the needs of minority renters, who are more likely to live in families with four or more residents.

**f. Cost of Housing**

Increasing housing costs are not a direct form of housing discrimination. However, a lack of affordable housing does constrain housing choice. Residents may be limited to a smaller selection of neighborhoods because of a lack of affordable housing in those areas.

**1. Rental Housing**

The median housing value in the Baltimore-Towson MSA increased 78.9% between 1990 and 2008, after adjusting for inflation. Median gross rent increased 19.2% during the same period. By comparison, real household income increased only 4.2%.

11 Housing value is the Census respondent’s estimate of how much the property (house and lot, mobile home and lot, or condominium unit) would sell for if it were for sale. This differs from the housing sales price which is the actual price that the house sold for.

*Data only available for Baltimore MSA. The MSA is the Census Metropolitan Statistical Area, and includes the five jurisdictions plus additional municipalities in the Greater Baltimore Region.

The affordability problem posed by real household income failing to keep pace with median rents has been compounded by a loss of affordable rental units across the region. Between 2000 and 2008, the number of affordable rental units renting for less than $500 per month decreased by 33,443 units, or 69% of all units in that price range. At the same time, the number of higher-rent units ($1,000 per month or higher) increased 338.5%, from 32,130 in 2000 to 140,882 in 2008. Most of this increase was in Baltimore City and Baltimore County. Over 27,000 high-rent units were added to the housing stock in Baltimore City and 45,000 in Baltimore County. These two jurisdictions also experienced the largest declines in affordable units renting for $500 or less.

Source: U.S. Census Bureau, Census 2000, SF-3 (H52); 2008 American Community Survey (B25063)
The National Low Income Housing Coalition provides annual information on the Fair Market Rent (FMR) and affordability of rental housing in counties and cities in the U.S. for 2009. In the Baltimore-Towson MSA, the FMR for a two-bedroom apartment is $1,203. In order to afford this level of rent and utilities, without paying more than 30% of income on housing, a household must earn $4,010 monthly or $48,120 annually. Assuming a 40-hour work week, 52 weeks per year, this level of income translates into a housing wage of $23.13.

In the Baltimore-Towson MSA, a minimum wage worker earns an hourly wage of $7.25. In order to afford the FMR for a two-bedroom apartment, a minimum wage earner must work 128 hours per week, 52 weeks per year. Or, a household must include 3.2 minimum wage earners working 40 hours per week year-round in order to make the two-bedroom FMR affordable.

In the Baltimore-Towson MSA, the estimated average wage for a renter is $14.79 an hour. In order to afford the FMR for a two-bedroom apartment at this wage, a renter must work 63 hours per week, 52 weeks per year. Or, working 40 hours per week year-round, a household must include 1.6 workers earning the average renter wage in order to make the two-bedroom FMR affordable.

Monthly Supplemental Security Income (SSI) payments for an individual are $674 in the Baltimore-Towson MSA. If SSI represents an individual's sole source of income, $202 in monthly rent is affordable, while the FMR for a one-bedroom is $1,002.

OBSERVATION: Minimum-wage earners and single-wage-earning households cannot afford a housing unit renting for the HUD fair market rent. Minorities and female-headed households are disproportionately impacted due to their lower incomes.
2. Sales Housing

The housing market in the Baltimore region has slowed in activity since 2006, coinciding with the beginning of the national housing slump. As of December 2010, the number of units sold was 19,990, almost half of the number sold during 2006. During the same period, the average length of time a house remained on the market nearly doubled from 59 days to 103 days. Median sales price throughout the region dropped from a peak of $264,200 in 2007 to $235,150 in 2010.

*Includes sales closed through November 2010

Source: Real Estate Business Intelligence; Calculations by Mullin & Lonergan Associates

The availability of affordable sales units differs across the geographic areas. On the whole, 6.7% of units sold across the region in 2009 were priced less than $100,000. However, in Baltimore City, 28.8% of units sold were in this price range, compared to only 0.2% of units (a total of only four units) sold in Howard County. On the other end of the spectrum, within Baltimore City, units selling for more than $500,000 comprised 3.4% of the sales market. By comparison, these more expensive homes accounted for 16.9% of units sold in Anne Arundel.
County and 28% in Howard County. Therefore, lower-income households are often priced out of the sales market in the suburban counties surrounding Baltimore City, in particular Anne Arundel and Howard Counties. This has contributed to a concentration of LMI homeowners within the City of Baltimore in addition to adding pressure to the market for affordable rental units in suburban areas. Each jurisdiction offers some form of assistance to lower-income homeowners through its federal entitlement programs, such as down payment and/or closing cost assistance or rehabilitation loans or grants, but such programs cannot entirely equalize the affordability of opportunity across communities so drastically different.

*Source: Real Estate Business Intelligence; Calculations by Mullin & Lonergan Associates*

**OBSERVATION:** An excess of supply in the City of Baltimore has depressed housing values, making the City the lowest-priced area of the region in which to purchase a home. As the region’s Black households have a median income far lower than the median household income for Whites, Black residents are more likely to experience neighborhood limitations in locating an affordable home to purchase. This situation underscores the need to expand affordable housing opportunities in areas that do not have a concentration of minorities, the majority of which are located outside of Baltimore City.
3. **Regional Inventory of Public and Publicly Assisted Housing**

The majority of public housing units across the greater Baltimore region are located in racially concentrated lower-income neighborhoods, by virtue of their heavy concentration in areas of the City of Baltimore that are more than 70% Black. More than 90% of all public housing units across the region are owned and operated by the Housing Authority of the City of Baltimore (HABC), which houses more than 20,000 residents in 10,000 housing units. Additionally, Anne Arundel County operates 1,026 units; the City of Havre de Grace operates 60 units in Harford County; and Howard County operates 50 units. There are no public housing units anywhere in Baltimore County or outside of Havre de Grace in Harford County.

Federal funding became available in the late 1930s for local housing authorities to house lower-income populations, though the initiative to develop public housing programs was left to local governments. The City of Baltimore established HABC in 1937 to house its lowest-income residents. Other jurisdictions, such as Baltimore County, have maintained a deliberate decision not to build public housing.

The minimal availability of public housing available outside of the City burdens HABC disproportionately with the task of housing the poorest residents of the entire region, though the Authority’s shrinking inventory is increasingly insufficient to meet demand. In 1996, Congress repealed the federal requirement that demolished public housing units must be replaced on a one-for-one basis. Since that time, HABC’s inventory has dwindled precipitously. A 2007 report estimates that the number of occupied HABC units dropped 42% in 15 years, from 16,525 units in 1992 to 9,625 in 2007. HABC counted 10,322 occupied units in March 2010.

While the Authority’s practice of demolition without equal replacement has been attributed to its declining budget, HABC’s obligations resulting from recent lawsuits also impact its ability to replace housing. For instance, the outcome of the Bailey case required the Authority to divert more than $20 million from Replacement Housing Factor Funds and Section 8 voucher funds to retrofit 830 units for tenants with disabilities. Nonetheless, HABC’s elimination of dwelling units from the public housing stock has escalated since its implosion of high-rise projects, and that trend is especially problematic given the considerable growth of the population in need of affordable family housing.

---

12 The concentration of public housing units in neighborhoods of extreme concentrations of Black residents is demonstrated by the public housing map in the Baltimore City section of the AI. As of 2000, only 9.5% of family public housing units across the region were located in census tracts with poverty rates below 10%, according to testimony from plaintiff’s expert witness Jill Khadduri, former director of HUD’s Division of Policy Development, in Thompson v. HUD records.

Public housing waiting lists across the region demonstrate overwhelming demand. According to recent estimates from each public housing authority with units in the five-jurisdiction area covered by the AI, there are currently 11,458 units suitable for occupancy.14 These units are roughly 97% occupied, and an additional 20,086 families continue to wait for public housing. Thus the standing inventory can accommodate only about one-third of those in need. Most of the households on a waiting list (93.6%) are extremely low income, earning less than 30% of the area median family income, and nine of every 10 are racial or ethnic minorities. More than 3,600 households on waiting lists reported a disability.

**OBSERVATION:** The minimal availability of public housing available outside of the City burdens the Housing Authority of Baltimore City disproportionately with the task of housing the poorest residents of the entire region, though the Authority’s shrinking inventory is increasingly insufficient to meet demand.

Privately owned housing units developed with public subsidy are more common across the Baltimore region. HUD’s Picture of Subsidized Housing dataset contains records on the number of subsidized units by type for 2000 and 2008. Comparisons between the two years are based on an assumption of consistent data collection and reporting methods. HUD’s records show that in 2008, there were 36,121 affordable rental units across the Baltimore region subsidized by Low-Income Housing Tax Credits (LIHTC), Section 236 funds, project-based Section 8 vouchers or other multifamily housing development programs. This represents a 19.8% regional increase in the availability of such units from 2000, when HUD reported 30,151. Among project types, Section 236 became less prevalent, as the number of units subsidized by this funding source dropped by 5,356, or 65%. At the same time, HUD reported substantial gains in LIHTC units

---

14 HABC has 1,235 additional units that are vacant and offline due to renovation, consent-decree-mandated alterations, modernization, disposition, demolition or approval for non-dwelling purposes.
(6,246, or 68.6%), project-based Section 8 units (3,502, or 39.1%) and affordable units financed by other sources (1,578, or 40.8%). Details appear in the following table.

Note: Some variation may exist in HUD classification of sites by funding type between years of study.

The region’s subsidized private rental units are concentrated within the City of Baltimore, but not to the extent that the region’s public housing exists almost exclusively in the City. More than half of the region’s assisted private units are in the City, and the remaining 47% of units are distributed among the four outlying counties.

**Distribution of Region’s Subsidized Private Housing by Jurisdiction, 2008**

Source: HUD Picture of Subsidized Housing
The number of privately owned assisted units across the Baltimore region is nearly three times as large as the number of public housing units. The availability of these affordable units and the recent increase in their supply create housing opportunities for lower-income households. However, these opportunities are, for the most part, limited to areas of poverty and minority concentration. Stakeholders interviewed during the preparation of the AI described housing development climates that discouraged the expansion of affordable multifamily rental developments into neighborhoods that are traditionally White and low-poverty.

For example, the majority of subsidized units in Harford County are located in or near Havre de Grace, Aberdeen, Magnolia, Joppa and Joppatowne, all of which qualify as areas of Black and/or LMI concentration. In the City of Baltimore, subsidized housing is concentrated in neighborhoods that are at least 70% Black and sparse in areas that are less than 15% Black, according to a scatter plot of HUD data that appears in the City’s section of the AI. Affordable development opportunities are limited in Baltimore County, where subsidized rental LIHTC housing projects are easily politically defeated due to the County’s requirement that developers gain approval from a County Council member prior to applying for financial assistance. The County has funded only two tax-credit projects, both of which involve the rehabilitation of existing buildings. In Anne Arundel County, subsidized housing is most commonly located in the minority-concentrated area surrounding Annapolis and Odenton. Likewise, in Howard County, assisted affordable units are focused in areas of racial concentration in the southern end of the County. Across all jurisdictions in the region, affordable housing for seniors or persons with disabilities was more likely to be located in non-impacted areas of opportunity than affordable housing for lower-income families.

OBSERVATION: Privately owned subsidized affordable units are concentrated in the City of Baltimore, where 53% of all such units across the region are located. In other jurisdictions, assisted housing is commonly located in areas of racial concentration.
4. Distribution of Section 8 Housing Choice Vouchers

In addition to public housing and privately owned subsidized housing, Section 8 Housing Choice Vouchers also provide affordable housing opportunities across the Baltimore region. In total, housing authorities across the region administer 23,901 Section 8 housing choice vouchers. In addition to those currently using vouchers, there are 49,086 households on voucher waiting lists, which suggests that the supply of vouchers can accommodate only about one-third of demand. It is worth noting that HABC’s waiting list has been closed to everyone except persons with disabilities since 2003 and closed entirely since 2008. If HABC’s list had continued to accumulate the names of everyone attempting to apply for a voucher within the last seven years, it would almost certainly be much longer. As it is, Baltimore County has the longest current waiting list at 20,197 households competing for 5,799 vouchers, a wait that will exceed seven years for the newest applicants.

The majority of households on the waiting list (87.1%) have incomes below 30% of the area median family income. More than three-quarters (78.2%) are of minority race or ethnicity, and more than one in five (21%) reported a disability.

* HABC’s voucher waiting list closed to everyone except persons with disabilities in 2003, then to everyone in 2008.

Sources: Housing Commission of Anne Arundel County, Housing Authority of Baltimore City, Baltimore County Housing Office, Harford County Housing Agency, Howard County Housing Commission

Vouchers administered by HABC are subject to legal remedies and other program stipulations that carry regional significance. As a result of the consent decree following Bailey v. HABC, 850 tenant-based vouchers and 500 project-based vouchers were set aside for non-elderly persons with disabilities, as defined in the decree. HABC was required to offer these vouchers in order of application to eligible disabled persons on the waiting list who are participating in the Enhanced Leasing Assistance Program (ELAP) until the vouchers are exhausted. As vouchers expire, they are offered to the next eligible family. ELAP is administered by an outside...
contractor to provide housing search assistance to non-elderly persons with disabilities.

Additionally, up to 500 vouchers are set aside for issuance to eligible chronically homeless households, as determined and referred by Baltimore Homeless Services. As part of the 10-Year Plan to End Homelessness, non-elderly persons with disabilities on the waiting list who are also chronically homeless and participate in ELAP may receive priority for the 1,350 Bailey set-aside vouchers over non-elderly persons who are not chronically homeless.

Finally, more than 1,700 voucher holders have leased a unit through the Baltimore Housing Mobility Program, a specialized, regional tenant-based voucher program in which participants receive mobility counseling and assistance in locating housing in non-impacted areas. This program developed in response to the partial consent decree resulting from Thompson v. HUD, in which HUD was accused of failing to affirmatively desegregate Baltimore City public housing.15

The map on the following page depicts the distribution of Section 8 vouchers per 1,000 households by census tract within each jurisdiction. Tracts with greater concentrations of voucher holders were more likely to be located in or near the region’s urban core, while tracts with no voucher holders among their residents were more likely to be located in the more sparsely developed suburban or rural areas of outlying counties.

OBSERVATION: In total, housing authorities across the region administer 23,901 Section 8 housing choice vouchers. In addition to households currently using vouchers, there are 49,086 households on voucher waiting lists, which suggests that the supply of vouchers can accommodate only about one-third of demand. Housing mobility initiatives have leveraged vouchers as a means of mitigating segregation, but many voucher households continue to locate in neighborhoods of racial concentration, primarily in and around the region’s core.

15 The partial consent decree additionally required HABC to create 911 hard units of affordable housing in non-impacted areas. As of May 2010, in addition to HOPE VI developments, HABC had completed 214 partnership units, 40 scattered-site units and 10 other units, with an additional 89 near completion.
VI. Home Mortgage Financing

a. Mortgage Lending Practices

Under the terms of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (F.I.R.R.E.A.), any commercial lending institution that makes five or more home mortgage loans must report all residential loan activity to the Federal Reserve Bank under the terms of the Home Mortgage Disclosure Act (HMDA). The HMDA regulations require most institutions involved in lending to comply and report information on loans denied, withdrawn, or incomplete by race, sex, and income of the applicant. The information from the HMDA statements assists in determining whether financial institutions are serving the housing needs of their communities. The data also helps to identify possible discriminatory lending practices and patterns.

HMDA data for 2006 through 2008 was analyzed for the Baltimore region. Reviewing this data helps to determine the need to encourage area lenders, other business lenders and the community at large to actively promote existing programs and develop new programs to assist residents in securing home mortgage loans for home purchases. The data focus on the number of homeowner mortgage applications received by lenders for home purchase of one- to four-family dwellings and manufactured housing units in the region.

Figure 2-33 summarizes the trends in applications, denials, and originations across the region from 2006 to 2008.
Between 2006 and 2008, the region experienced a steep drop in the number of mortgage loan applications. This can be attributed primarily to stagnating home sales rates in the region that coincide with the national housing market crisis. Throughout the region, the number of loan applications dropped 58.7%. The applications for Blacks and Hispanics fell at even greater rates of 68.8% and 81.3%, respectively, suggesting that these protected classes became disproportionately less able to afford home ownership.

Over the course of the two years, the percentage of applications that resulted in loan originations increased slightly, a trend likely related to the decreasing number of total applications. Correspondingly, the number of overall application denials decreased between 2006 and 2008.

A more in-depth analysis of HMDA data for each City is included in Section 3 of each individual AI; however, a summary of the aggregate data for the region is included below.
Figure 2-34 provides the summary data for loan actions for the year 2008, the most recent year for which data is available.

Note: Percentages in the Approved, Approved Not Accepted, Denied, and Withdrawn/Incomplete categories are calculated for each line item with the corresponding Total Applications figures. Percentages in the Total Applications categories are calculated from their respective total figures. There were no FSA/RHS loans in 2008.

*Total applications do not include loans purchased by another institution.

**Hispanic ethnicity is counted independently of race.

i. **Conventional Loans vs. Government-Backed Loans**

Loan types in 2008 included conventional mortgage loans and a variety of government-backed loans, including FHA, VA, and FSA/RHS. Comparing these loan types helps to determine if the less stringent underwriting standards and lower down payment requirements of government-backed loans expand home ownership opportunities. In the Baltimore region, 36.5% (11,664) of the households that applied for a mortgage loan applied for a government-backed loan.

The denial rates for government-backed loans were lower than the denial rate for conventional loans.

- The denial rate for FHA loans was 11.6%.
- The denial rate for VA-guaranteed loans was 7.2%.
- The denial rate for conventional loans was 12.9%.
- The denial rate for FSA/RHS loans was 33.3%, though only six applications were filed.

**a. Denial of Applications**

Credit history, collateral and unsatisfactory debt-to-income ratios are the major reasons for denial of home mortgage applications throughout the Baltimore region.

For all racial and ethnic groups, the denial rates dipped in 2007 and increased again in 2008, which coincided with the national recession. Whites had the lowest denial rates in all three years. Blacks had the highest denial rates, which were on average about twice as high as the denial rate for Whites.

</table>

*Hispanic ethnicity is counted independently of race.

For this analysis, lower-income households include those with incomes between 0%-80% of MFI, while upper-income households include households with incomes above 80% MFI.

Of the 3,896 applications that were denied by area lending institutions, 3,854 reported household income. Lower-income households had a denial rate of 16.8% in 2008, compared to 10% for upper-income households. Applications made by lower-income households accounted for 44% of all denials in 2008, though they accounted for only 31.9% of total applications.

b. High-Cost Lending Practices

The widespread housing finance market crisis of recent years has brought a new level of public attention to lending practices that victimize vulnerable populations. Subprime lending, designed for borrowers who are considered a credit risk, has increased the availability of credit to low-income persons. At the same time, subprime lending has often exploited borrowers, piling on excessive fees, penalties and interest rates that make financial stability difficult to achieve. Higher monthly mortgage payments make housing less affordable, increasing the risk of mortgage delinquency and foreclosure and the likelihood that properties will fall into disrepair.

Some subprime borrowers have credit scores, income levels and down payments high enough to qualify for conventional, prime loans, but are nonetheless steered toward more expensive subprime mortgages. This is especially true of minority groups, which tend to fall disproportionately into the category of subprime borrowers. The practice of targeting minorities for subprime lending qualifies as mortgage discrimination.

Since 2005, Housing Mortgage Disclosure Act data has included price information for loans priced above reporting thresholds set by the Federal Reserve Board. This data is provided by lenders via Loan Application Registers and can be aggregated to complete an analysis of loans by lender or for a specified geographic area. HMDA does not require lenders to report credit scores for applicants, so the data does not indicate which loans are subprime. It does, however, provide price information for loans considered “high-cost.”

A loan is considered high-cost if it meets one of the following criteria:

- A first-lien loan with an interest rate at least three percentage points higher than the prevailing U.S. Treasury standard at the time the loan application was filed. The standard is equal to the current price of comparable-maturity Treasury securities.
- A second-lien loan with an interest rate at least five percentage points higher than the standard.

Not all loans carrying high APRs are subprime, and not all subprime loans carry high APRs. However, high-cost lending is a strong predictor of subprime lending, and it can also indicate a loan that applies a heavy cost burden on the borrower, increasing the risk of mortgage delinquency.

Figure 2-39 summarize the trends in high-cost lending for 2006 to 2008. As the number of originations decreased, so did the proportion of high-cost loans. For lower income households, high-cost loans comprised 10.7% of all originations in 2008, which was one-third of the rate of high-cost loans in 2006. Among upper income households, high-cost loans fell from 28% to 5.2% of all mortgages.
Minority households are disproportionately affected by high-cost loans in the region. Among lower-income households, Blacks are about twice as likely to have a high-cost loan across the three years. Among upper income households, Blacks are about three times as likely as other groups to have a high-cost loan.

Three-Year Totals 36,099 8,172 22.6% 69,082 12,824 18.6%

Note: Does not include loans for which no income data was reported.

* Hispanic ethnicity is counted independently of race.

**OBSERVATION:** Black and Hispanic mortgage holders across the region were consistently more likely to have high-cost loans than White mortgage holders. Among lower-income households, Blacks were about twice as likely to have a high-cost loan across the three years. Among upper income households, Blacks were about three times as likely as other groups to have a high-cost loan.
VII. Regional Patterns in Fair Housing Complaints

This section provides a review of fair housing complaints or compliance reviews where a charge of a finding of discrimination has been made. Additionally, this section will review the existence of any fair housing discrimination suits filed by the United States Department of Justice or private plaintiffs in addition to the identification of other fair housing concerns or problems.

A more in-depth analysis of the housing discrimination complaints filed in each of the five jurisdictions is included in Section 2 of each individual AI; however, a summary of the aggregate data for the region is included below.

a. Comparison of Classes Protected by Law

Distinctions between anti-discrimination laws at the federal, state and local levels are significant because they represent the levels at which persons claiming discrimination can seek recourse. In general, local laws across the Baltimore region provide a wider scope of protection than the federal Fair Housing Act and the Maryland Human Relations Act, though there are some exceptions. Three jurisdictions (Anne Arundel County, Baltimore County and the City of Baltimore) do not prohibit discrimination on the basis of familial status, as federal and state law do. This means that residents of those areas who allege this type of discrimination cannot pursue cases at the local level. While sexual orientation is not a basis for federal protection, it is protected by the State of Maryland and all regional jurisdictions except Baltimore County. Therefore, Baltimore County residents who experience this type of discrimination may only pursue recourse at the state level.

The importance of local anti-discrimination laws as a policy stance should not be understated. The lack of laws against familial status discrimination in Anne Arundel County, Baltimore County and Baltimore City has a minimal practical effect – such practices are still made illegal by state and federal law – but it is a point of inconsistency with the Fair Housing Act that should be remedied as a part of each community’s efforts to affirmatively further fair housing.

Local jurisdictions in the Baltimore region provide protection on a variety of progressive fronts that are less commonly found in other areas of the country, including gender identity, genetic information, political opinion and personal appearance. A detailed comparison of all categories receiving statutory anti-discrimination protection across the region appears in the following table.

* The City of Baltimore protects some sources of income (alimony and child support), but not others, such as rental assistance

**OBSERVATION:** In general, local laws across the Baltimore region provide a wider scope of protection than the federal Fair Housing Act and the Maryland Human Relations Act, though there are some exceptions. Varying protections among jurisdictions emphasize the need for education and outreach at the local level on fair housing rights and procedures for complaint.

**b. Trends in Fair Housing Complaints**

A lack of filed complaints does not necessarily indicate a lack of housing discrimination. Some persons may not file complaints because they are not aware of how to go about filing a complaint or where to go to file a complaint. In a tight rental market, tenants avoid confrontations with prospective landlords. Discriminatory practices can be subtle and may not be detected by someone who does not have the benefit of comparing his treatment with that of another home seeker. Other times, persons may be aware that they are being discriminated against, but they may not be aware that the discrimination is against the law and that there are legal remedies to address the discrimination. Finally, households may be more interested in achieving their first priority of finding decent housing and may prefer to avoid going through the process of filing a complaint and following through with it. Therefore, education, information, and referral regarding fair housing issues remain critical to equip persons with the ability to reduce impediments.
The Office of Fair Housing and Equal Opportunity (FHEO) at HUD receives complaints from persons regarding alleged violations of the Fair Housing Act. Between January 1996 and August 2010, 630 cases were filed through HUD for the entire region. Baltimore City had the highest number of complaints (242), accounting for one-third of all complaints in the region. Baltimore City also had the highest number of complaints per 100,000 residents (calculated using 2008 population). Although Harford County had the lowest number of complaints, Anne Arundel County had the lowest rate of complaints, with 18.6 complaints filed per 100,000 residents.

Race was the most commonly alleged basis of discrimination, followed by disability. Together, race and disability accounted for 81% of all complaints. Several complaints alleged more than one basis for discrimination.

Of the 630 cases in the region, 377 (60%) were found to be without probable cause and closed. An additional 151 (24%) were withdrawn by the complainant and ten (1.6%) were successfully conciliated. Twenty-two cases (3.5%) were settled by a judicial consent order, which often results in a Voluntary Compliance Agreement (VCA). Three cases are pending trial – two in Baltimore City and one in Baltimore County. Details on the resolution of complaints for each jurisdiction are included in Figure 2-42.

c. Hate Crimes

Federal law allows for the prosecution of crimes motivated by animus or enmity against a protected class, including race, color, national origin, religion, sex, familial status or disability.

Maryland law addresses hate crime specifically through Article 27 470A - Religious and Ethnic Crimes, which deems it illegal for any person to vandalize or attempt to vandalize any religious property or to interfere by force or threat of force with any person in the exercise of their religious beliefs. It is also forbidden to damage, destroy, burn or otherwise vandalize the property of a person or an institution because of their race or beliefs, or to harass or commit a crime against any person because of their “race, color, religious beliefs or national origin.” The statute includes an extra sentencing enhancement for crimes motivated by hate. Notably, Maryland’s laws against hate crimes protect fewer classes than its anti-discrimination laws related to housing and employment, which extend also to the basis of sexual orientation.

Those who experience hate crimes in Maryland are encouraged to report such incidents to local law enforcement agencies and human relations agencies. Most hate crime cases are prosecuted by the state.

The U.S. Department of Justice compiles hate crime statistics annually. In 2008, the latest year for which data is available, there were 100 hate crime incidents reported across the State of Maryland. Three occurred in Baltimore City and three in Anne Arundel County (in both jurisdictions, two related to sexual orientation, one related to race); nine were reported across Baltimore County (three race, three religion, two sexual orientation, one ethnicity); five occurred in Harford County (all related to race); and 22 were reported in Howard County (16 race, three religion, one sexual orientation and one ethnicity). The discrepancy in reported instances among jurisdictions could be related to differences in reporting or classification protocol among law enforcement agencies. It is also likely that many hate crimes go unreported. The presence of hate crimes in all AI jurisdictions is an indicator that discrimination exists and likely factors into the reality of daily life in many communities.
8. REGIONAL CONSIDERATIONS

I. Regional Transportation Network

Households without a vehicle, which in most cases are primarily low-moderate income households, are at a disadvantage in accessing jobs and services, particularly if public transit is inadequate or absent. Access to public transit is critical to these households. Without convenient access, employment is potentially at risk and the ability to remain housed is threatened. In 2000, there were 39,848 households in the greater Baltimore Region without access to a vehicle, comprising 15.1% of all households. Baltimore City had the greatest proportion of transit-dependent households, at 35.9%. Throughout the region, renter households were significantly more likely than owners to be transit-dependent, with 31.3% of renter households without access to a vehicle, compared to 6.7% of owner households. In the counties surrounding the urban core, renter-occupied households were more than four times as likely as owner-occupied households to depend on public transportation.

*Source: U.S. Census Bureau, 2000 Census SF3 (H44)*

Among categories of race and ethnicity, minority households were more likely than White households to be transit-dependent. Whereas 8.4% of White households in the region were transit-dependent, almost four times as many (31.9%) of Black households were similarly without access to a vehicle. Asian and Hispanic households also experienced higher rates of transit-dependence, at 10.4% and 14.4%, respectively. These aggregate trends were also reflected in the individual counties that compose the region, except in Baltimore County, where Asians were less likely than White households to be transit-dependent.
The table below shows the modes of transportation that residents the Baltimore region used to get to work in 2000. The majority of residents (86.6%) drove to work, with 74.9% of people driving alone. Only 6.6% of residents used public transportation. Buses and trolleys were the most popular form of public transportation. Among those who used public transportation, 70% used buses.

The Baltimore region is served primarily by the Maryland Transit Administration (MTA). MTA is a multi-modal system with 73 local and commuter bus routes and 89 subway, light rail, and commuter train stations. In 2009, MTA provided over 100 million passenger trips, about two-thirds of which were on fixed-route buses. MTA also funds locally operated transit systems (LOTS), which provide local fixed route services in the county areas.
a. **Destinations and Routes**

MTA services are concentrated in (1) the more densely populated areas in Baltimore City and the surrounding areas, and (2) the commuter corridor between Maryland and Washington D.C.

Within the City of Baltimore, transportation links major tourist, business and residential areas. The Metro Subway and most bus routes run from about 5 a.m. to midnight, and several bus routes offer all-night services. The light rail runs north-south through the City, connecting the BWI Thurgood Marshall Airport and Cromwell in the south and the Hunt Valley Business District located north of City Center.

Moving further out of the City, fixed routes become more sparse and infrequent. The Maryland Area Regional Commuter (MARC) train provides weekday service on three commuter rail routes to Union Station in Washington D.C. Commuter buses connect major urban areas to Baltimore City, including Annapolis, Columbia, Havre de Grace and Bel Air. Within Howard County, which is situated between Baltimore and Washington D.C., a variety of bus routes service local areas and connect residents to both Baltimore and the Washington D.C. area. For counties north of the City, including Baltimore and Harford Counties, connection options are more limited.

In addition to the MARC trains and commuter buses, locally operated transit systems (LOTS) provide local transportation routes within each of the four counties covered in this AI. Many of these LOTS routes, however, do not offer evening, weekend or Sunday service. Therefore, transit-dependent households may have constrained mobility to access jobs and resources. This is particularly important for renter-households in the counties. As discussed earlier, renter households are significantly more likely to not have access to a vehicle.

b. **Accessibility**

All of MTA’s fixed route buses are equipped with wheelchair lifts and/or ramps, in accordance with the Americans with Disabilities Act (ADA). Metro and light rail stations are also equipped with elevators and boarding platforms for passengers using mobility devices. In conformance with ADA regulation, MTA offers paratransit services for passengers who cannot independently access fixed route services.

Through its Commuter Choice program, MTA has developed incentives to encourage taking public transportation to work. Eligible employers are able to
distribute reduced fare passes to their employees and can receive tax credits for providing commuter benefits.

The metropolitan planning organization for the region is the Baltimore Regional Transportation Board (BRTB). The BRTB oversees regional planning efforts and provides direction and oversight in the development of the region’s federally mandated long-range transportation plan. The most current long-range plan, Outlook 2035, outlines a strategy for developing a transit system that is efficient, accommodating for future growth, and environmentally friendly. Outlook 2035 has seven goals:

1. Improve safety
2. Maximize transportation system management and operations
3. Increase accessibility and mobility
4. Preserve the environment
5. Improve transportation system security
6. Link transportation investment to land use and economic development
7. Foster inter-jurisdictional participation and cooperation.

Outlook 2035 predicts that regional growth and economic development will center in the suburban areas of the region. According to the BRTB projections, there will be substantial job growth in Anne Arundel and Harford Counties, and most commuting will be between suburban areas, instead of into urban centers.16 Given the current sparseness of transportation options within and between suburban areas, appropriate planning will be important to ensure transit-dependent households will be able to benefit from this projected employment growth.

OBSERVATION: The lack of adequate public transportation between the urban core of Baltimore City and the employment growth centers expected in the upcoming years will exacerbate the intractable concentrations of poverty and disenfranchisement in the City. A key component of future regional planning initiatives must involve the linking of inner city residents with job opportunities in the outlying suburban areas.

II. Comparison of Jurisdictional Tax Profiles

Taxes impact housing affordability. While real estate tax differentials are not an impediment to fair housing choice in and of themselves, they can impact the choice that households make with regard to where to live. Tax increases can be burdensome to low-income homeowners, and increases are usually passed on to renters through rent increases. Tax rates for specific districts and the assessed value of all properties are the two major calculations used to determine revenues collected by a jurisdiction. Determining a jurisdiction’s relative housing affordability, in part, can be accomplished using tax rates.

However, a straight comparison of tax rates to determine whether a property is affordable or unaffordable gives an incomplete and unrealistic picture of property taxes. Local governments with higher property tax rates, for example, may have higher rates because the assessed values of properties in the community are low, resulting in a fairly low tax bill for any given property. In all of the communities surrounding a jurisdiction, rates for various classes of property (residential, commercial, industrial, etc.) are assigned to balance each community’s unique set of resources and needs. These factors and others that are out of the municipality’s control must be considered when performing tax rate comparisons.

Taxes in Maryland are assessed through a tax rate per $100 of a property’s value. Property taxes are a significant source of revenue for counties and municipalities, used to fund education and social and administrative services. In addition to locally levied taxes, the state draws .112 mills per $100 on all real property throughout Maryland.

Property taxes in Maryland are levied on the assessed fair market value of a property. Local and county governments conduct assessments every three years, and increases in property values are phased in over the three years between assessments. For example, if a property’s assessed value increases by $30,000, the taxable value of a property will increase by $10,000 each of the next three years. This phase-in helps to avoid sharp increases in a resident’s tax liability due to rapid increases in property values.

Additionally, Maryland’s policy of requiring reassessment every three years minimizes inequity in the system of taxation, as changes in assessed value keep pace with changes in market value across the board. In states that do not require periodic reassessment, the assessed values of years long past continue to apply to 1) neighborhoods that are in decline, resulting in over-taxation on poorer residents, and 2) neighborhoods where values have increased, resulting in under-taxation on those who are prospering. This is not the case across Maryland, where assessments are generally up-to-date. However, rapid shifts in the local housing market over the past decade, including sliding home values in the neighborhoods hit hardest by foreclosure, have added room for inequity.

Although most revenues in Maryland are traditionally raised through four main taxing agencies (state, county, municipality and school district), smaller taxing districts with specific functions – such as providing funds for fire protection,
mosquito abatement, or libraries – are increasing in popularity. In response to particular local needs, some jurisdictions have established various special service areas where additional rates apply.

The table below shows the estimated taxes per $100,000 assessed value of a property in several major taxation jurisdictions in the Greater Baltimore area. The following narrative more closely examines local tax policies in Baltimore City and the counties of Anne Arundel, Baltimore, Harford and Howard.

Source: Maryland Department of Assessments and Taxation

OBSERVATION: Real estate taxes are a factor in housing choice inasmuch as they affect affordability across jurisdictions. The highest rates across the region are found in Baltimore City. Center cities in metropolitan areas commonly exercise a high tax effort to support existing urban services from a base of shrinking population and generally lower housing values. Estimated total property taxes per $100,000 in valuation were roughly half as expensive in outlying counties, though the property values in those areas are higher.

a. Anne Arundel County

Anne Arundel County (excluding Annapolis) has the lowest property tax rate in the region. The County is divided into two taxing zones: Annapolis and the balance of the County. The County-wide tax rate is 0.876 mills. Within Annapolis, the County charges a levy of 0.523 mills, while the City charges its own levy of 0.53 mills, for a total tax rate of 1.053 mills.

*Source: Anne Arundel Office of Finance*

For a house valued at $100,000 in 2009-2010 in Anne Arundel County without exemptions or credits, the annual property tax is an estimated $988, or about $82 a month. The same house in Annapolis would have an annual property tax of $1,165, or about $97 a month. There is also an additional annual $275 trash collection fee for every household in the County.

For lower-income households, Anne Arundel County administers the Homeowners Tax Credit to provide tax relief.

### b. City of Baltimore

Baltimore City has the highest real estate tax rate in Maryland, ranging from 2.38 to 2.512 mills per $100 of assessed value depending on district. City government establishes the municipal tax rate, which was 2.268 mills in 2009-2010. This relatively high rate is due largely to the mismatched range of services the City provides as an emptying urban core: The City is in the difficult process of scaling its expenditures back to match the lesser demands of a dwindling population. It is also due to the hollowing out of the City in another way: As residents move away and property values decline, the tax burden falls more heavily onto the shoulders of those who stay.

Within the City there are two special Community Benefits Districts (CBD) where additional levies apply. Since 1993, City law has allowed a limited number of neighborhoods to be designated as self-taxing, quasi-public management authorities that oversee safety, sanitation, development and beautification projects. The two districts are Midtown (which includes parts of Bolton Hill, Charles North, Madison Park and Mount Vernon) and Charles Village. Neither neighborhood has a concentration of Black or lower-income residents. Other neighborhoods may earn designation as a CBD, but the process requires substantial grassroots organization and fundraising. Park Heights, a Black-concentrated, lower-income neighborhood on the northwest side of the City, failed in an effort to organize as a CBD in the late 1990s. The table below details the various tax levies for Baltimore City.
For a property valued at $100,000 without exemptions or credits, the annual property tax in 2009-2010 was an estimated $2,380, or about $198 per month. In the Community Benefits Districts, the annual tax liability would increase by $330 in Midtown and $318 in Charles Village.

Baltimore City offers a variety of tax credits and incentives to assist target populations as well as to foster development. The Homeowners and Homestead Credits and Fallen Hero Tax Credit provide tax relief to eligible property owners. Additional credits are available to individuals, organizations and corporations to promote urban revitalization and renovation. These include:

- Newly constructed dwelling credit, to encourage the construction and purchases of new homes;
- Vacant dwelling credit, to promote the renovation and reuse of vacant residential properties;
- Brownfield credit, to encourage the redevelopment of contaminated abandoned and/or underutilized industrial and commercial sites; and
- Enterprise Zone credit, to encourage investment in one of the City’s 8 designated economically distressed zones.

Tax credits are also available for home improvements and renovations of historic properties.

c. **Baltimore County**

Property taxes accounted for less than half of Baltimore County’s revenue in 2008. The County has a uniform composite tax rate of $1.10 per $100 assessed value and has no special taxing districts or zones. Therefore, a property valued at $100,000 in 2009-2010 without exemptions or credits would have an estimated annual property tax of $1,212, or about $101 per month. Households are also responsible for a
water and sanitation fee according to their level of water usage throughout the year.

Baltimore County offers a variety of tax credits and incentives to assist target populations as well as to encourage development. The Homeowners Tax Credit and Hardship Installment Payment Program provide tax relief to eligible households. Additional credits are available to individuals, organizations, and corporations to promote urban revitalization and renovation. These include:

- Brownfield credit, to encourage the redevelopment of contaminated abandoned and/or underutilized industrial and commercial sites;
- Credit for historic and architectural protection, for eligible residential and commercial rehabilitation work; and
- Revitalization credits for improvements in commercially zoned areas.

d. Harford County

Property taxes accounted for more than half of the general fund revenues in Harford County in 2000 and were the primary source of funding for education and public safety in the County. Harford charges a countywide tax rate of 0.908 mills and a highway tax of 0.156 mills. Three municipalities (Aberdeen, Bel Air, and Havre de Grace) levy additional taxes. The table below includes the levy types in Harford County.

<table>
<thead>
<tr>
<th>Levy Type</th>

<tr>
<td>Municipality Levy - Bel Air</td>
<td>0.500</td>
</tr>
<tr>
<td>Municipality Levy - Havre de Grace</td>
<td>0.61</td>
</tr>
</tbody>
</table>

For a house valued at $100,000 in 2009-2010 in Harford County without exemptions or credits, the annual property tax is an estimated $1,176, or about $98 a month. Properties in Aberdeen, Bel Air, and Havre de Grace would have higher tax liabilities of $1,864, $1,676, and $1,786, respectively. Households are also responsible for a water and sanitation fee according to their use of water throughout the year.
Harford County and the taxing municipalities within the County offer credits and exemptions for the elderly, disabled and lower-income families. The County administers the Homeowners Tax Credit and the Homestead Exemption. Property owners may also qualify for the Solar Energy/Geothermal Device Tax Credit for the installation of approved devices.

e. Howard County

Property taxes accounted for about one-third of revenues in Howard County in 2010, and were used primarily to fund education, as well as facility management, public safety and other community services. The County is divided into two taxing zones, metropolitan and rural. Fire tax rates vary between the districts, and within the metropolitan district, and additional ad valorem charge is levied to cover water and sewer system costs. The table below includes the various tax levies throughout the County.

<table>
<thead>

</tr>
</tbody>
</table>

*Levies do not include annual trash collection fees

Source: Howard County Department of Finance

For a property in the metropolitan district of Howard County valued at $100,000 without credits or exemptions, the estimated annual property tax in 2009-2010 is $1,341, or about $112 a month. This does not include the annual trash collection fee, which is an additional $225 for trash, recycling and yard service, $210 for only trash and recycling or $39 for only recycling.

Howard County offers a variety of assistance programs for residents to lower their property tax liability. The Homestead Credit limits the annual increase in taxable assessment on the owner-occupied residential properties to a fixed percentage. In Howard County, the County assessment increase is limited to 5%, and the State assessment increase is limited to 10%. Households with incomes under a certain income threshold can qualify for the Homeowners Tax Credit Program, and seniors may be eligible for tax relief in the form of credits and deferrals. Howard County also provides credits to low income households to assist in covering trash collection fees. Lastly, owners
may receive tax credits for installing solar or geothermic energy devices.

OBSERVATION: The tax credits and exemptions available to home buyers and others who seek to revitalize Baltimore City neighborhoods through home ownership initiatives are crucial to the long-term success of re-inventing many City neighborhoods. Without the critical component of a stabilizing home ownership segment in many lower income neighborhoods, reversing decades-long trends of deterioration, neglect, disinvestment and suburban flight cannot occur.

III. Real Estate Advertising

Under federal law, no advertising with respect to the sale or rental of a dwelling may indicate any preference, limitation, or discrimination because of race, color, religion, sex, handicap, familial status or national origin. In addition, Maryland law extends protection to persons based on marital status. The prohibition on discriminatory practices applies to publishers, such as newspapers and directories, as well as persons and entities who place real estate advertisements. Publishers and advertisers are responsible under federal law for making, printing, or publishing advertisements that violate the Fair Housing Act on its face. Thus, they should not publish or cause to be published an advertisement that expresses a preference, limitation or discrimination on the basis of race, color, religion, sex, handicap, familial status, or national origin. The law, as found in the Fair Housing Amendments Act of 1988, describes the use of words, photographs, symbols or other approaches that are considered discriminatory.

A review of The Baltimore Sun was conducted to evaluate the frequency and type of unlawful advertising.\(^{17}\) No advertisements for rental or sale units included any type of discriminatory qualification on the type of occupants sought. Placement of the fair housing logo was consistent.

Central Maryland Homes was also reviewed.\(^{18}\) Each ad in this publication had an Equal Housing logo, and an Equal Housing explanation appeared on the site’s table of contents. On the companion website, Greater Baltimore Homes (www.homes-online.com), the logo was apparent, but the explanation of fair housing rights appeared to be absent. No discriminatory language was found.

The Baltimore County Housing Office provides GoSection8.com as a tool for Housing Choice Voucher holders and participating landlords. A review of that site revealed a lengthy and complete section on fair housing rights. No discriminatory ads were found.

\(^{17}\) The Sunday edition dated January 31, 2009, was randomly selected for review.
\(^{18}\) Volume 29, No. 2, January 27, 2010
**Homes.com**, a heavily trafficked national website featuring homes across the region, did not appear to contain any information for potential home buyers on fair housing law, rights or responsibilities. The site’s various search features did not provide users with a means to locate homes with accessibility features. No discriminatory language was found.

### IV. Regional Research and Publications Review

#### f. Kirwan “Communities of Opportunity” Framework

In research activities related to community development, fair housing and social justice, the Kirwan Institute for the Study of Race and Ethnicity at The Ohio State University applies a conceptual model that evaluates the extent to which people have access to critical opportunities that influence life outcomes. The Institute groups resources and services these into three major opportunity structures – economic opportunity/mobility, neighborhood health and educational opportunity.

The “Communities of Opportunity” model is based on the premise that affirmatively connecting people to critical opportunity structures creates positive, transformative community change. The model is designed to promote fair investment among people and neighborhoods across a region with the ultimate goal of improving life outcomes regionwide. Through the application of the model, the Institute aims to mitigate the extent to which some citizens have been long isolated from opportunity by entrenched patterns of racial and economic segregation. There are two ultimate goals: to bring opportunity to areas where it does not exist, and to connect people to areas where it does.

The Institute’s director, John Powell, applied the framework to the Baltimore region in his 2005 expert testimony in *Thompson v. HUD*. Powell proposed that the *Thompson* remedy should ultimately consider the distribution of affordable housing across the region on the basis of fair access to opportunity structures, not simply on the basis of fair sharing between suburban and urban areas. In the Baltimore region in particular, access to critical opportunity structures for lower-income households and minorities has been limited by development patterns and policies that perpetuate racial, ethnic and economic segregation.

To measure opportunity, the Kirwan framework studies economic health (by proxy of job availability and growth), educational opportunity (by way of student performance, student economic status and teacher qualifications) and neighborhood quality (using a wide range of data reflecting neighborhood stability and quality of life). A collection of variables is selected to determine an opportunity index.
score for each opportunity structure. The Kirwan study maps on the following pages illustrate these measurements in the Baltimore region.

In evaluating Baltimore, Powell classified each census tract in the region according to the opportunity score on a five-point scale: very low, low, moderate, high or very high. The individual economic opportunity structures can also be combined and understood as a composite measure of opportunity for the Baltimore region. Some of the outcomes of the analysis were as follows.

- Economic opportunity and mobility are focused in three primary areas: North of the City of Baltimore in Baltimore County, in some areas near downtown Baltimore and in areas of Howard and Anne Arundel counties southwest of the City.

- The region’s healthiest neighborhoods are almost entirely outside of the City of Baltimore. Large clusters of healthy neighborhoods exist in all of the outlying counties.

- The distribution of educational opportunity is heavily skewed toward suburban counties. All of the census tracts falling into the “very low” category of educational opportunity fall within the City.

- Ultimately, judging by the composite index, high-opportunity census tracts are concentrated in suburban counties. While the City is the primary location of census tracts with “very low” opportunity, “very high” opportunity tracts are clustered in northern Anne Arundel County, central Baltimore County, southern Harford County and southern Howard County.

Powell additionally found that Black households are segregated disproportionately into low-opportunity areas and that affordable housing is deficient in high-opportunity areas. In making recommendations for the Thompson remedy, he concluded:

- The remedy must be sensitive to opportunity and to the importance of location in determining access to opportunity.

- The remedy must be regional.

- The remedy must be conscious of race, due to the nature of the violation and HUD’s fair housing duties and the realities of the housing market.

- The remedy should not force the dispersal of public housing residents who wish to remain in their present location.

- The remedy must be driven by the goals of desegregation and opportunity access.

- The remedy should make use of the variety of tools available to HUD, such as vouchers and new unit production.

g. **PRRAC/BRHC Evaluation of Baltimore Housing Mobility Program**

In October 2009, the Poverty Race Research and Action Council (PRRAC) and the Baltimore Regional Housing Campaign (BRHC) published a progress report on a specialized regional voucher mobility initiative that was designed as a partial remedy in the settlement of *Thompson v. HUD*. The Baltimore Mobility Program is currently administered by Metropolitan Baltimore Quadel under contract with the Housing Authority of Baltimore City and under the oversight of HUD and the Maryland ACLU. In the first six years following its launch in 2003, the program moved 1,522 families to low-poverty, racially integrated City and suburban neighborhoods.

The program assists current and former public housing families and those on the waiting list for public housing to locate and secure housing opportunities in low-poverty, predominantly White neighborhoods. Families who meet eligibility criteria and enroll in the program receive financial and budgeting education, tours through high-opportunity neighborhoods and personal counseling to find and move into private-market housing. The Housing Choice Vouchers administered through the program can be used anywhere in the Baltimore region, but they are specifically targeted to areas where less than 10% of residents live in poverty, where less than 30% are racial minorities and where less than 5% of all housing units are HUD-owned or HUD-assisted. Following their affirmative move, families in the program receive at least two years of counseling to help them adjust to their new communities, in addition to employment and transportation assistance. This ensures that participants can access the employment opportunities in suburban areas that may not be well connected to the region’s public transit system. MBQ further expands the geography of opportunity to voucher holders by marketing the program to landlords and monitoring the placement locations of participating families.

The 2009 evaluation deemed the program’s early results to be promising, “proving that poor African-American families are able and willing to make it beyond the confines of traditional public housing neighborhoods and that low-poverty and predominantly White neighborhoods are able and willing to enfold the new families into the fabric of the community.” \(^1^9\)

The program is strongly results-oriented, so the preponderance of quantitative measures testifying to its success is perhaps not surprising. The evaluation cites MBQ administrative and demographic data, a 2007 ACLU survey of participants who had lived in new

neighborhoods for at least 14 months and a 2008 ACLU survey of recent first-time movers in the program. Results from all three sources indicate that the impact of the program in its first six years was substantial, both in the number of families assisted and in the degree to which participating families experienced a better quality of life. Specifically, according to selected statistics from the evaluation:

- Of the 1,522 families that moved to low-poverty, racially integrated neighborhoods, 88% moved from inner-city Baltimore to suburban counties. Neighborhoods moved from were 80% Black and 33% poor, while neighborhoods moved to were 21% Black and 7.5% poor.

- In schools in the new neighborhoods, an average of 33% of students are eligible for free or reduced lunch, compared with 83% in the original neighborhood schools of participant families. Roughly nine in 10 settled parents said that their children appeared to be learning better or much better in their new schools.

- After moving, 80% of participants said that they felt safer, more peaceful and less stressed. Nearly 40% said they felt healthier.

- Most participant families who were eligible to move from their initial unit (62%) chose to stay. Of those who chose to move again, only 19% moved from the suburbs back to the City. Families who made a second move went to neighborhoods that were less segregated and significantly less poor than the areas where they lived before joining the program.

The evaluation draws a conclusion that is inevitable, based on the strength of the program’s results: The early successes of the Baltimore Housing Mobility Program elevate it as a model for using vouchers to connect disadvantage minority families to the opportunities available in resource-rich low-poverty neighborhoods.

**h. Moving to Opportunity**

The City of Baltimore was among five U.S. cities selected by HUD to participate in Moving to Opportunity, a long-term research demonstration project initiated in the mid-1990s. The program randomly selected experimental groups of households with children and provided them with housing counseling and vouchers that required them to move to low-poverty neighborhoods. HUD’s premise was to determine the extent to which moving poor families out of poverty-concentrated neighborhoods would increase their life chances. The experimental design for Moving to Opportunity was heavily influenced by the *Gautreaux* initiative in Chicago, a court-ordered remedy for
racial segregation in that city’s public housing program. In the Gautreaux remedy, low-income Black families experienced positive employment and education outcomes after being relocated to predominantly White neighborhoods in the city and its suburbs.

Moving to Opportunity was a longitudinal study to gauge outcomes on three groups: the experimental group, which received Housing Choice Vouchers that they could use only in census tracts with less than 10% poverty, a Section 8 comparison group that received vouchers with no restrictions or counseling, and an in-place control group, which continued to receive project-based assistance. In Baltimore, the experimental group included 252 households.20

According to updates presented at the National Conference on Assisted Housing Mobility in June 2010, final evaluation is still underway to determine the program’s results. However, HUD has supported research on Moving to Opportunity that has produced the following initial conclusions:

- Families in the experimental group did not move far. Their new neighborhoods were the worst of the best – while poverty levels were lower than in their original neighborhoods, as the program required, the new neighborhoods were still areas of racial minority concentration and were more likely to be central-city areas with rising poverty. Of the 300-plus eligible low-poverty tracts where participants across all of the test cities could move, they moved to only 44 different tracts, most of which were in decline.

- That phenomenon could be due to a variety of decision constraints, ranging from structural (discrimination, lack of available housing or employment) to family experience (strong social connections in limited areas) or simply the complications of life in poverty (domestic violence, low-wage work, health problems, depression).

- Safety was a primary motivating factor for those who participated in the program. Participants experienced large gains in neighborhood safety and physical/mental health. Anxiety, depression and obesity, which are all barriers to employment, were decreased.

- Gains in school quality were limited, and there was no evidence of gains in learning. This is possibly due to many participants having stayed in central city neighborhoods.

---

i. 2002 Regional Fair Housing Action Plan

In Fall 2001, following up on HUD and local government concerns that few of the action steps identified in the 1996 Analysis of Impediments to Fair Housing Choice in the Baltimore Metropolitan Area had been implemented, the Baltimore Metropolitan Council convened the six participating entitlement jurisdictions (the cities of Annapolis and Baltimore, along with Anne Arundel, Baltimore, Harford and Howard counties) to address the regional plans and the lack of initiative in implementing strategies to eliminate the identified impediments. During a series of meetings, jurisdictions expressed several objections to the methodology and recommendations of the 1996 AI, arguing that the report’s conclusions were based on national trends rather than local data, and that the AI recommended actions beyond the scope of local government. In moving forward with a regional plan to address impediments within their control, the participants requested technical assistance from HUD, which selected the Maryland Center for Community Development to assist in the composition of a revised regional action plan for fair housing.

The resulting 12-page document was the 2002 Baltimore Regional Fair Housing Action Plan (FHAP), intended to amend the 1996 AI. It focuses on subject areas that the jurisdictions agreed were regional in nature and within the local government realm of expertise and control: assisted housing, mortgage lending, home sales/rental practices and homeowner’s insurance. Summaries of the actions agreed upon in each action area by the participating entitlement communities are as follows.

1. Assisted Housing

Acknowledging a lack of universal Section 8 Housing Choice Voucher acceptance and a highly competitive market for voucher holders in search of housing, the AI jurisdictions planned to a) improve the market attractiveness of the Section 8 programs, b) improve the administration of the Section 8 program; and c) provide training for voucher holders.
Specifically:

- The jurisdictions agreed to share the cost of hiring Baltimore Metropolitan Council to conduct research on rental housing data to determine if adjustments should be made to fair market rents (FMRs) to remove barriers to housing opportunities. The jurisdictions planned to use the outcome of the research to work with HUD to adjust FMRs accordingly. (July 2002 to January 2003)

- To improve the negative public perception of the Section 8 program, the jurisdictions planned to coordinate regional landlord outreach activities by hiring an outside contractor. The FHAP envisions a multi-year education and outreach campaign designed to frame affordable housing as an economic development issue centered on working families. (Summer 2002 to Fall 2004)

- The jurisdictions planned to improve regional administration of the voucher program by reducing bureaucratic barriers for private landlords (July to December 2002) and by standardizing program information across the region. (December 2002 to July 2003)

- To provide training for tenants, the jurisdictions planned to contract with an outside agency, which would provide standardized education on consumer issues and tenant rights and responsibilities regionwide. (No timeline)

2. **Homeowner’s Insurance**

The participating jurisdictions agreed that discrimination in the market for homeowner’s insurance was a serious issue worth addressing, though the local governments had limited direct experience in handling this type of problem. The FHAP strategy is to increase awareness of the impact of homeowner’s insurance practices on minority homebuyers by hosting an educational workshop. (Fall 2002 to Spring 2003)

3. **Mortgage Lending**

Similarly, the jurisdictions recognized the continued existence of discrimination in the mortgage lending market, though they determined that more discussions were needed to determine appropriate strategies to address the issue on a regional basis. The
FHAP has a stated goal to expand conventional mortgage lending to low-income households and racial and ethnic minorities at all income levels.

As possible avenues for future collective action, the FHAP suggests:

- Conducting regional outreach to promote the use of housing counseling among homebuyers
- Contracting for regional mortgage lending testing to determine the extent of existing discrimination
- Applying as a regional group for funding and education under HUD’s Fair Housing Initiatives Program, which would also require the establishment of a regional complaint and referral process

4. Sales and Rental Practices

The jurisdictions reported “little knowledge” of discrimination in this area, but planned to determine if patterns of discrimination existed against members of the protected classes. This effort would be initiated by meetings among entitlement jurisdictions in 2002 to discuss action items, possibly to include testing for discrimination or educational programs for landlords and real estate agents.

The years that have passed since the publication of the 2002 Baltimore Regional Fair Housing Action Plan allow for long-range perspective on the intents and effects of the document. It serves as a record of the communication among participating jurisdictions in efforts to address the regional barriers to fair housing choice identified in the 1996 AI. The FHAP demonstrates a collective understanding of issues transcending local government boundaries and was produced as a result of a collective will to advance fair housing choice. At the same time, the most important regional impediment apparent in the document may be one that is not addressed by action steps – the difficulty that individual jurisdictions face in imposing regional solutions without a centralized implementation agency or leadership structure. The FHAP notes that “each jurisdiction may undertake fair housing activities on their own, but no group exists to advance regionally coordinated activities that cross jurisdictions.”

This, perhaps, is the explanation for any of the action steps that remain seemingly incomplete.
V. Intergovernmental Cooperation and Coordination

The nature of intergovernmental relations in the Baltimore region as they relate to affirmatively furthering fair housing can be characterized as loosely cooperative. Organizations such as the Baltimore Regional Housing Campaign have recognized the need for meaningful multi-jurisdictional approaches to the difficult task of distributing housing opportunities fairly across the entire region, but a lack of structure uniting local governments in this task has made it nearly impossible. This is demonstrated in the region’s 2002 Fair Housing Action Plan, in which the few truly coordinated efforts that were proposed to mitigate discrimination have been implemented in only limited ways or not at all.

HUD holds each jurisdiction participating in the regional AI accountable to meet fair housing standards. Without exception, the approach of each, as recorded in Comprehensive Annual Performance Evaluation Reports (CAPERs) for their respective CDBG and HOME programs, has been to pursue the solutions most readily accessible and most easily implemented through locally administered means – educational programs and outreach, most commonly.

The Baltimore Metropolitan Council is the federally recognized metropolitan planning organization that organizes elected executives from each of the AI jurisdictions. The Council was created to collaborate on strategies, plans and programs that serve regional interests, but it has never served as a vehicle for the implementation of regional housing policy. Instead, it addresses such practical concerns as cooperative purchasing, computer mapping and the allocation of federal transportation spending. The Council served as the facilitating agency for the most recent AI, completed in 1996, and followed up with the production of the Fair Housing Action Plan in 2002. Though the Council provided a forum for discussion among jurisdictions, the task of addressing impediments to fair housing choice was ultimately left to each individual local government.

The region’s enduring segregation and the limitations to fair housing choice identified in this document make the case that more meaningful steps are needed. Achieving better fair housing outcomes across the Baltimore region would not require a large increase in spending for any jurisdiction, but better planning, a higher degree of consistency and a genuinely dedicated commitment to meaningful progress by all.

One example is the way in which Section 8 Housing Choice Vouchers are administered. The City of Baltimore and the four contiguous counties participating in the AI each operate a separate voucher program. Each program has its own set of policies and procedures, including preferences for admission, payment standards for persons with disabilities or locations outside of concentrated areas, and portability of vouchers to other jurisdictions. Due to the close proximity of the five jurisdictions and the close interconnections between housing, employment and transportation, the residents of the region could greatly benefit from a regional Section 8 program. That is, one administering entity for the five Section 8 programs currently in place in greater Baltimore.
Such an endeavor would require a great deal of re-organization and collaboration, but the benefits to the potential end-users of the program would outweigh the initial costs. Ideally, there would be one set of policies and procedures for the program, which would be administered for the entire region. While there may be one intake office located in each jurisdiction, there would be a single set of rules and regulations, including portability requirements that would enable applicants to move around the region without any artificial barriers based on municipal boundaries. Such a system would affirmatively further fair housing for the multitude of members of the protected classes who rely on Section 8 vouchers for housing choice.

Similar approaches are recommended in the Fair Housing Action Plan of this AI to improve other policy areas. In total, they represent a shift in the mindset of participating jurisdictions to collectively implement means of expanding housing choice.

OBSERVATION: A regional Section 8 Housing Choice Voucher Program in the Baltimore area would expand fair housing choice for low-income minorities, in particular Black households, whose current housing opportunities are restricted to the urban core of the City of Baltimore. With better housing and education opportunities available in the suburban counties, as well as the majority of projected employment growth, to not regionalize the Section 8 program would perpetuate the long-established residential segregation patterns. This inaction, in and of itself, would be discriminatory.

VI. Fair Housing Advocacy Organizations

In the absence of substantive fair housing action at the regional level, the work of fair housing advocacy organizations has become critically important to creating new housing opportunities for members of the protected classes in and around Baltimore.

In particular, the Baltimore Regional Housing Campaign advocates for the alignment of public policies and private investments to overcome racial and economic segregation and promote the right and means of all families to live in opportunity-rich, low-poverty areas with high-performing schools and economic prosperity. The Campaign involves the Greater Baltimore Urban League, the Innovative Housing Institute, BRIDGE, ACLU of Maryland, the Poverty and Race Research Action Council (PRRAC) and the Citizens Planning and Housing Association. The group’s work has included advocacy for land use policies that increase housing choice for low-income families, facilitating investment that creates affordable housing in high-opportunity communities, working to eliminate impediments to fair housing and building regional support for mixed-income communities and housing mobility programs. Through such actions, the
Campaign serves a watchdog function that has been essential to the progress made in the Baltimore region to affirmatively further fair housing.

The Campaign’s component advocacy organizations have worked in similar roles, evaluating the policy direction of local governments and driving changes that eliminate impediments to housing choice. Legal Aid, in addition to the aforementioned agencies, has influenced housing policy discussions.

Testing for fair housing discrimination in the private market in the greater Baltimore region has been the responsibility of Baltimore Neighborhoods, Inc., which contracts with entitlement communities to provide this service as well as education and outreach. Other organizations providing education and outreach include the Greater Baltimore Community Housing Resource Board and the Maryland Disability Law Center.

Residents who experience housing discrimination can report it to a variety of public and non-profit agencies, including the Baltimore City Community Relations Commission, the Baltimore County Human Relations Commission, the Anne Arundel County Human Relations Commission, the Howard County Office of Human Rights, the Maryland Disability Law Center, HUD FHEO and Baltimore Neighborhoods, Inc. All of these organizations provide complaint intake, investigation, mediation and referral, and some are additionally empowered to enforce anti-discrimination laws.

OBSERVATION: There is an overlap of services provided within the fair housing advocacy industry in the Baltimore region. While Baltimore Neighborhoods, Inc. is the only organization that provides paired testing services, several advocacy organizations provide outreach and education services. Another category of advocacy organizations serves a fair housing watchdog function (i.e., ACLU, Legal Aid, etc.). Generally speaking, there is little communication and collaboration within the industry. Some advocates compete against one another for scarce CDBG funds to support their operations. Some advocacy organizations are struggling for their very financial survival. This competitive climate detracts from the region’s ability to address fair housing impediments. All of this suggests the need for a streamlined and more highly organized framework for the delivery of fair housing services to the region.
VII. State of Maryland Qualified Allocation Plan

The Qualified Allocation Plan (QAP) is a public policy that establishes the Maryland Department of Housing and Community Development’s priorities for rental housing initiatives financed in part with equity from the sale of Low Income Housing Tax Credits. The QAP is periodically updated for updates and legislative changes. The latest QAP, approved in late January 2011, includes changes from the 2010 QAP.

Because the competition for tax credits is robust, tax credit developers design their rental housing projects to achieve maximum scoring under DHCD’s scoring categories. The QAP has a major impact on what populations are served, the types of projects that will be undertaken (i.e., new construction or rehabilitation of existing dwellings) and, indirectly, where rental housing is built or rehabilitated.

In a recent federal fair housing case, *The Inclusive Communities Project, Inc. v. Texas Department of Housing and Community Affairs (N.D. Tex. 2010)*, the Texas QAP was challenged by a local affordable housing advocate. The Department of Housing and Community Affairs is the housing finance agency for the State of Texas. The lawsuit alleged that TDHCA disproportionately approved tax credits for low-income housing in minority neighborhoods and denied applications for family tax credit housing in predominantly Caucasian neighborhoods. The plaintiff alleged that TDHCA's policy in awarding credits perpetuated racial segregation in violation of the FHA. TDHCA argued that it prioritized tax credit applications for projects located in QCTs in accordance with Section 42 and that as such, it was unavoidable that tax credit projects would be located in concentrated minority neighborhoods rather than Caucasian neighborhoods. TDHCA submitted a motion for summary judgment (i.e., dismissal of the case). On September 28, 2010, Judge Fitzwater denied TDHCA's motion and affirmed the plaintiff's standing to sue. This case is now headed to trial. It is within this context that DHCD’s QAP plays a critical role in the fair housing landscape across the Baltimore region.

When a draft of the 2011 Maryland QAP was originally released for public review in late 2010, the Baltimore Regional Housing Campaign (BRHC) responded to DHCD with comments indicating that the QAP is out of compliance with DHCD’s federal obligation to affirmatively further fair housing. Particularly:

- BRHC noted that a threshold requirement for local government support was carried from the 2010 QAP into the new edition. This “exclusionary tool,” as it is labeled in the comments, allows a community that is hostile to affordable housing for lower-income families to block proposed projects. Local governments may withhold approval for projects without stating a justification. The result is that developers opt out of developing family housing in areas known for resistance to lower-income housing, choosing instead to concentrate efforts on elderly housing or other locations known to accept lower-income housing. This presents an impediment to fair housing
choice by substantially narrowing the types and locations of neighborhoods where affordable family housing is likely to be developed.

- In an effort to incentivize the spread of affordable housing into areas of opportunity, thereby mitigating economic and racial segregation, the 2011 QAP awards five points to applications for projects with “above average” indicators of opportunity. BRHC argued that five points out of a total of 305 is inadequate, and that DHCD should award 10 points, along with other considerations, for projects meeting that criterion.

OBSERVATION: Tax-credit housing projects across the Baltimore region are strongly influenced by the state’s allocation policy for tax credits, the Qualified Allocation Plan. The current iteration of this document presents multiple policy impediments to fair housing choice.
9. REGIONAL IMPEDIMENTS TO FAIR HOUSING CHOICE

Regional impediments are those barriers that are multi-jurisdictional in nature and that limit fair housing choice for members of the protected classes. The purpose of this section of the AI is to encourage local officials to think and act regionally to overcome impediments that transcend individual HUD entitlement jurisdictions or otherwise offer opportunities to achieve efficiencies in housing production or the delivery of fair housing services.

1. **The Baltimore Regional Fair Housing Group (“the Group”) is an underutilized asset.** The Group is an informal affiliation of HUD entitlement communities in the Baltimore Metropolitan Area. In concept, the Group is a valuable mechanism for intergovernmental cooperation on matters pertaining to housing and community development. Members of the Group (including Baltimore City, Baltimore County, Howard County and Harford County) collaborated to conduct this regional AI in 2009. Anne Arundel County later joined in the AI initiative. The motivation for conducting the AI on a regional scale was to define a fair housing strategy wherein each entitlement jurisdiction would play a role in affirmatively further fair housing in the Baltimore Metropolitan Area. Fair housing-related legal actions in the Baltimore area during the past 15 years envision a regional approach to the deconcentration of poverty in the City of Baltimore. Furthermore, there are certain fair housing activities such as education, outreach, testing and enforcement that can be conducted more efficiently at the regional level. While the Group has taken an important step in conducting a regional AI, it has not yet realized its full potential as an important organizational facilitator for positive change.

2. **There is a lack of adequate public transportation connecting the urban core of Baltimore City with the suburban employment centers in the surrounding counties.** For example, Anne Arundel County has only two bus routes (Ritchie Highway corridor and Riviera Beach), and there is a relative absence of fixed-route service to BWI airport. Route-planning decisions made by the Maryland Transit Administration are ostensibly based on balancing need with available resources, but the pattern of areas served and underserved suggests that the process is not without political influence. Gaps in the existing transportation network exacerbate the intractable concentrations of poverty in the City.

3. **There are no requirements in the Smart Sites nomination form pertaining specifically to affordable housing.** Through the Smart Sites program, high-impact smart growth initiatives can attain project-based designation that facilitates agency coordination and the targeting of resources. In its nomination form, the State provides additional points to developers seeking low income housing tax credits for projects located in a Transit Oriented Development (“TOD”) Zone, but does not require that jurisdictions submitting sites for TOD
designation include a strategy to ensure that there is a range of housing opportunities available.

4. Section 8 Housing Choice Vouchers are one of the most effective means of deconcentrating poverty in the Baltimore metropolitan area. **However, the Section 8 program faces impediments, as follow:**

   a. The program is administered by separate agencies that maintain unique sets of administrative requirements and procedures, an arrangement that complicates porting for voucher holders who wish to move among local jurisdictions. The administration of portability in each jurisdiction should be coordinated to achieve maximum consistency with other housing authorities across the region, which would have the effect of opening more doors to voucher holders.

   b. The lack of a state law prohibiting discrimination on the basis of a person’s source of income means that effectively, landlords in localities that do not offer this protection may lawfully deny housing to voucher holders. Currently, only Howard County has a law that prohibits discrimination based on source of income. New fair housing legislation is needed throughout the region that adds source of income as a protected class. Bills prohibiting discrimination based on source of income have been considered by the State legislature over the past few years. Although they have not been enacted, the support for this legislation has grown. There is a need for the entitlement jurisdictions to work together on the enactment of such a law.

   c. Voucher payment standards are insufficient to afford units in numerous areas of the region, and significant federal cutbacks in the resources available to the Section 8 program have made raising payment standards unrealistic. Ideally, payment standards would be increased for persons with disabilities and other members of the protected classes who wish to make affirmative moves from impacted neighborhoods to higher-cost, non-impacted neighborhoods. Funding limitations make this prospect currently impossible.

5. **Segregated housing patterns in the region are reinforced by a provision in Maryland’s Qualified Allocation Plan that requires local government to approve and contribute to tax credit projects.** This policy increases the likelihood that proposed tax credit projects will be resisted by NIMBYists or through political intervention.
6. **Fair housing training as a component of real estate agent continuing education is lacking.** Training is limited to a discussion of federal fair housing law. There is little or no required training for real estate agents relative to state fair housing law or the provisions of local fair housing laws. Several fair housing trainers across the state provide fair housing training services, but the quality and depth of the training varies considerably depending on the entity that is providing the training.

7. **The results of paired testing conducted in Baltimore City, Baltimore County and Harford County indicate that housing discrimination continues to exist, at least in these jurisdictions.** While some forms of discrimination may be intentional, other acts of discrimination reflect a lack of knowledge and understanding on the part of landlords. There is a need for expanded fair housing training and routine continuing education for landlords, apartment management staff, condominium associations and homeowner associations.

8. **Budgetary, practical and legal considerations have made it difficult to maintain existing public and affordable housing and create new units.** More than 90% of all public housing units across the region are owned and operated by the Housing Authority of the City of Baltimore (HABC), which houses more than 20,000 residents in 10,000 housing units. Many of HABC’s units are non-viable and obsolete, yet resources do not exist that would allow the Authority to replace units at the rate at which they are lost from the inventory. The reduction in the number of public and assisted housing units often reduces the number of hard units available to low-income persons across the region, many of whom are members of the protected classes.

9. **A lack of affordable, accessible units is an impediment to persons with mobility disabilities.** During the development of this AI, advocates reported an undersupply of affordable units accessible to persons with disabilities. However, it was beyond the scope of this report to determine whether and the extent to which there is an unmet need for accessible housing. Additional research is needed throughout the region to define the unmet need for accessible and visitable housing. This information will aid PHAs and other agencies in their Section 504 planning responsibilities and will guide public agencies in determining the appropriate number of accessible units to demand of developers receiving public funds.

10. **Tax credit equity investors lack an appetite for scattered site projects.** This eliminates an opportunity to acquire abandoned and foreclosed properties for the creation of affordable family rental housing. Participating jurisdictions should advocate that Maryland’s QAP be amended to more effectively incentivize scattered site tax credit housing in the Baltimore area.
11. **Due to the varying methods among participating jurisdictions of responding to fair housing complaints and enforcing local fair housing statutes, there is the potential for confusion among residents as to which rights and procedures apply in which areas.** The Maryland Commission on Civil Rights serves as a regional agency to enforce both state and federal fair housing laws, but local provisions vary. It would be helpful for housing consumers to be educated on local, state and federal fair housing laws and enforcement procedures.

12. Without exception, PHAs and local CDBG/HOME administrators interviewed during the AI expressed a commitment to comply with HUD’s expectations with regard to affirmatively furthering fair housing (AFFH). **However, the participation of elected officials and the strengthening of political will are key to the implementation of fair housing strategies.** It is important that City and county elected officials fully understand and respect HUD’s mandate to AFFH, a task HUD delegates to recipients of the federal funds it administers. Elected leaders in the Baltimore region would benefit from an educational effort aimed at expanding knowledge and awareness of HUD’s expectations on the part of elected officials. An education effort may also facilitate meaningful participation among elected leaders in the regional fair housing discussion and taking steps to AFFH in the Baltimore region.
10. REGIONAL FAIR HOUSING ACTION PLAN

This section of the AI identifies specific actions that can be taken to ameliorate regional impediments to fair housing choice.

a. Actions to preserve the supply of affordable rental housing for families:
   i. On a regional basis, support a replacement policy that encourages the region to work together to:
      1. Preserve the number of affordable housing units available by replacing vacant units or creating equivalent units in opportunity areas whenever economically feasible, and/or
      2. Provide housing choice vouchers, subject to funding availability, relocation assistance and mobility counseling for displaced families within the region.

b. Actions to expand the supply of affordable rental housing for families in opportunity areas:
   i. Encourage the State of Maryland to revise its QAP and other vehicles for affordable housing to:
      1. Create a setaside for tax credit projects in opportunity areas of the Baltimore region
      2. Give preference to family units in opportunity neighborhoods
      3. Eliminate local approval requirements, and
      4. Create incentives for scattered site tax credit projects.

c. Actions to educate elected officials on affirmatively furthering fair housing:
   i. Work with HUD, the Maryland Commission on Civil Rights, BMC or all three to conduct AFFH workshops for the elected officials of the participating jurisdictions.

d. Actions to expand the supply of accessible and affordable housing:
   i. Determine the unmet need for affordable, accessible housing for persons with mobility impairments in the Baltimore Metropolitan Area.
   ii. Take steps to address the identified unmet need for affordable, accessible housing for persons with mobility or sensory impairments in the Baltimore Metropolitan Area, which may include increasing the percentage of newly constructed rental housing units that must be made accessible for wheelchair users.
in accordance with the governing standards in place, and/or requiring that some percentage of newly constructed residential units meet universal design standards.

iii. Sponsor informational and education sessions for those local jurisdictions in the region that do not have inclusionary zoning laws. The sessions would focus on using such legislation to require that a percentage of all newly constructed housing units be affordable to low and moderate income households, and on tools that may be used as incentives to create affordable housing, such as public infrastructure subsidies, density bonuses and tax increment financing.

iv. Convene a meeting with the State of Maryland Department of Housing and Community Development, which already maintains a database of apartments and identifies units that are wheelchair accessible, to discuss steps that may be taken that will result in more landlords listing their units in the State database, especially landlords with units that are accessible or have accessible features. Such steps may include, but not be limited to, conducting regional outreach and education to property managers on the importance of submitting information regarding accessible units to the database. Explore how the database may be improved and/or linked to services like socialservice.com.

e. Organizational strategies for inter-jurisdictional cooperation and collaboration relative to fair housing:

i. Formalize the regional efforts to address fair housing issues through a formal memorandum of understanding (“MOU”), entered into by Anne Arundel, Baltimore, Harford and Howard Counties and Baltimore City (the “Baltimore Regional Fair Housing Group” or the “Group”). Pursuant to the MOU, each jurisdiction would address the regional issues by committing staff time to meet on a regular basis and financial resources, as available, such as local entitlement funds, competitive FHIP funds, and Sustainable Communities Initiative planning funds to carry out regional actions to address fair housing impediments. Funds received would be made available for uniform fair housing testing, education and outreach throughout the region.

ii. The Baltimore Regional Fair Housing Group will set goals each year and establish a schedule, which prioritizes the action steps recommended under this plan and articulates the scope of work and expected outcomes for each action. The Group’s regional
accomplishments will be reported in each participating jurisdiction’s CAPER.

iii. The Baltimore Regional Fair Housing Group will work to establish routine interaction and cooperation among the Baltimore Metropolitan Council (“BMC”), fair housing advocates, the entity implementing the mobility program established pursuant to the Thompson partial consent decree, transportation agencies, planning and zoning officials and other interested parties regarding the implementation of the regional AI.

iv. Examine the Section 8 porting procedures of each jurisdiction and, to the extent they are inconsistent, make them consistent. Work with HUD to convene a meeting to discuss porting procedures and regional cooperation. Request additional financial assistance from HUD to allow jurisdictions to implement increased payment standards to encourage moves to opportunity areas. If HUD provides the requested financial assistance, implement the increased payment standards.

f. Actions to encourage the inclusion of public transportation in opportunity areas of the region:

   i. Encourage entities engaged in transportation planning to involve housing agencies, housing advocates and developers of affordable housing in their planning and policy development processes, including obtaining their comments on specific programs, initiatives and policies released by local, state and federal transportation agencies and on funding strategies.

   ii. Encourage coordination between transportation and housing agencies to more effectively align housing and transportation investments and resources and to reflect both state and federal policies that are requiring more integrated approaches to community revitalization and development.

   iii. Encourage MTA to create a bus line that circles the Baltimore beltway and includes multiple stops.

   iv. Encourage MTA to review public transportation routes to ensure that:

       1. Service is provided between residential opportunity areas and areas of employment opportunity and job growth for both first shift and second shift workers
2. Service is provided between affordable housing resources and areas of employment opportunity and job growth for both first shift and second shift workers.

3. Service is provided between residential opportunity areas and educational institutions and health care facilities, and

4. The various transportation systems are connected in order for riders to move easily from one system to another.

iv. Encourage the State to include affordable housing as part of the requirements at sites designated as either a Smart Site or Transit Oriented Development (TOD) site.

vi. Pursue HUD and MD-DHCD Sustainable Communities opportunities, which will include:

1. Working with BMC on responding to Sustainable Communities NOFAs, and

2. Seeking funds to create a regional housing strategy, which would include funds for staff and a study to develop regional funding mechanisms.

g. Legislative actions

i. Advocate for the adoption of a statewide law that would include source of income as a class protected from discrimination.

h. Education and Outreach

i. Continue to hold routine regional education events on fair housing issues, especially as a means by which to educate housing professionals on relevant fair housing issues.

ii. Develop a brochure, to be distributed regionally and placed on each jurisdiction’s website, and a training program to educate multi-family property managers and landlords, especially those that operate in multiple jurisdictions, and real estate agents on the different fair housing ordinances and their applicability across the region. Use the Howard County training package and agreement with the Howard County Association of Realtors as a model.

Regional Analysis of Impediments to Fair Housing Choice

October 2011

Page 78
Appendix

PUBLIC REVIEW OF DRAFT AI AND REVIEW OF COMMENTS RECEIVED

The Analysis of Impediments to Fair Housing Choice prepared for the City of Baltimore and the surrounding counties of Anne Arundel, Baltimore, Harford and Howard, as well as for the region as a whole, was made available for public review and comment beginning December 7, 2011 and ending on February 1, 2012. Copies of the draft documents were available to access online. Hard copies were also available for review at the Enoch Pratt Free Library located at 400 Cathedral Street in downtown Baltimore.

A Public Hearing was held on January 18, 2012 in the Board of Estimates Room in Baltimore City Hall. A copy of the minutes from the Public Hearing is included in this Appendix.

Written comments on the draft AI documents were accepted through February 1, 2012. Copies of all written comments received through February 1, 2012 are included in this Appendix.

Several of the written comments warrant no response from the jurisdictions. These comments stated a position on the Draft AI, but did not pose a question or request additional information. The following narrative provides responses to those written comments which the jurisdictions deemed needed a response.

A comment regarding the analysis of the State of Maryland’s Qualified Allocation Plan (QAP) and disputed conclusions drawn in that section of the Draft AI was received from John Greiner, Housing Policy Officer, Maryland Department of Housing and Community Development.

Jurisdictions’ Response: The Draft AI has been updated to reflect the clarifications provided on the frequency of QAP updates and the use of public housing waiting lists. It has also been updated to note the statutory requirement to favor projects in qualified census tracts. However, the jurisdictions maintain that the local support requirements contained in the QAP establish an institutional mechanism for local “NIMBY” opposition to LIHTC housing without regard to the worthiness of projects proposed, as well as a pocket veto for local governments over LIHTC allocations that would discourage developers from even considering sites in communities resistant to affordable housing. The effects of this policy are obvious in the geographic concentration of LIHTC developments across the Baltimore region. The Baltimore Regional Housing Commission (BRHC) has commissioned original research demonstrating that even when LIHTC family projects are located in higher-opportunity suburban areas outside the City, they are often located in pockets of racial and ethnic segregation. These and other conclusions are further explained in BRHC’s housing discrimination complaint filed against the State of Maryland in August 2011.

Comments regarding the failure of the AI to address impediments to fair housing choice encountered by homeless persons were received from Carolyn Johnson, Managing Attorney,
Homeless Persons Representative Project, Inc. and Lauren Young, Director of Litigation, Maryland Disability Law Center.

_Jurisdictions’ Response:_ The Draft AI included demographic data on members of the protected classes. To the extent that the homeless population includes members of the protected classes (African Americans, families with children and people with disabilities as specified in the comment), then the Draft AI addressed impediments relative to the homeless population. To the extent that planning commissions, elected bodies and other public boards and commissions involved in the decision-making process (required of/by applicants of such facilities) may need fair housing training, such training is included in the Fair Housing Action Plan (FHAP). To the extent that management and operational staff of such homeless facilities may need fair housing training, such training is included in the FHAP.

Comments regarding the failure of the Draft AI to provide a detailed action plan were received from Lauren Young, Director of Litigation, Maryland Disability Law Center and Barbara A. Samuels, Managing Attorney – Fair Housing, American Civil Liberties Union of Maryland.

_Jurisdictions’ Response:_ The uncertainty of decreases in federal entitlement funding in the current year and over the next several years has caused the jurisdictions to proceed with caution in their respective and regional fair housing planning and implementation initiatives. To the extent that the recommended actions will be implemented, the jurisdictions will invest federal entitlement dollars to accomplish this. However, establishing benchmarks that may prove unattainable due to severe budgetary limitations will not serve any advantage.

A comment regarding the lack of participation by non-governmental rental housing providers in the AI process was received from Katherine Kelly Howard, Legislative Committee Chair, Maryland Multi-Housing Association, Inc.

_Jurisdictions’ Response:_ The lack of an invitation was an inadvertent omission during the stakeholder interviewing process. The Maryland Multi-Housing Association will be noted as a stakeholder in the next AI process.

A comment about the process of how the FHAPs will be incorporated into each respective jurisdiction’s Consolidated Plan, Annual Plan, Public Housing Agency Plan, or Moving to Work Plan was received from Barbara A. Samuels, Managing Attorney – Fair Housing, American Civil Liberties Union of Maryland.

_Jurisdictions’ Response:_ Each jurisdiction has the option of including fair housing initiatives from their AI document, as well as the regional AI document, into their current planning process. There is also the option of amending the current year’s planning document to incorporate the same.
The jurisdictions have made the determination that additional research will not be conducted at this time nor incorporated in the Draft AI. Relative to several comments, the jurisdictions were of the opinion that some of the additional analysis requested by comments would have simply bolstered the case already stated in the Draft AI: the need to create affordable housing opportunities outside of impacted areas. The Draft AI is the result of a process initiated in September 2009. The jurisdictions believe that it is in the best interest of all parties involved, most notably members of the protected classes, to conclude the AI process and begin the implementation of the FHAPs. Comments relative to the lack of specific data shall be maintained on file by the jurisdictions for the next AI process.
On January 18, 2012, the Baltimore Regional Fair Housing Group held a public hearing to solicit comments from the citizens of the Baltimore metropolitan area, including interested stakeholders, on the draft Analysis of Impediments to Fair Housing Choice (AI), which was released by Baltimore City and Anne Arundel, Baltimore, Harford and Howard Counties on Wednesday, December 7, 2011 for public review and comment.

Representatives from the local jurisdictions in attendance included Ms. Erin Karpewicz, Anne Arundel County; Ms. Amy Wilkinson and Mr. Steve Janes, Baltimore City; Ms. Elizabeth Glenn and Andrea Van Arsdale, Baltimore County; Ms. Sharon Grzanka and Ms. Sylvia Bryant, Harford County; and Ms. Tiffany Smith and Ms. Mary Campbell, Howard County. Also in attendance was Ms. Marjorie Williams, representing Mullin & Lonergan Associates, the independent consultant hired to conduct the AI. A listing of individual members of the public in attendance is attached as “Exhibit 1.”

At 6:31 p.m. Ms. Wilkinson called the public hearing to order. She welcomed everyone to the hearing and introduced the local government representatives identified in the preceding paragraph and Ms. Williams to the audience. She stated that the purpose of the hearing was to provide an overview of the AI process, the observed possible impediments and the corresponding action items, and to afford the public an opportunity to comment on the document.

Ms. Williams gave an overview of the AI process and the documentation utilized to conduct the analysis and provided a definition of affirmatively furthering fair housing. Ms. Williams then presented an overview of impediments identified and action steps listed in both the Regional AI and each individual local component. A copy of her presentation is attached as “Exhibit 2.”

Ms. Wilkinson then reviewed the process for providing comments on the AI. She stated that those in attendance who indicated on the sign-in sheet that they wanted to speak would be given an opportunity to speak for up to five (5) minutes. She also strongly encouraged those wishing to comment to also provide written comments on or before February 1, 2012. Those wishing to speak were then called in order of sign up. The following members of the general public and individuals representing organizations provided verbal comments:

Ms. Katherine Howard, representing Maryland Multi-Housing Association
Ms. Cecilia Norman
“Wingo”
William Fields
Ms. Lauren Young, representing the Maryland Disability Law Center
Ms. Maureen Daly, representing BRIDGE and Beyond the Boundaries for the Archdiocese of Baltimore
Ms. Naomi Binko, representing BRIDGE
Bro. Jerry O’Leary, representing Beyond the Boundaries of the Archdiocese of Baltimore and the Bishop Murphy Initiative for Justice and Peace
Rev. Alan D. Traher, representing The Lutheran Church of Our Redeemer and BRIDGE
Mr. Mel Freeman, representing Citizens Planning and Housing Association
Ms. Carolyn Johnson, representing the Homeless Persons Representation Project
Mr. Patrick Maier, representing the Innovative Housing Institute and the Baltimore Regional Housing Campaign
Ms. Barbara Samuels, representing ACLU of Maryland
Ms. Helene F. Perry, representing Beyond the Boundaries
Ms. Ferguson, representing Baltimore County NAACP
Mr. Gregory Countess, representing the Legal Aid Bureau

Ms. Wilkinson then reminded those in attendance that written comments would be accepted until Wednesday, February 1, 2012 at 4:30 p.m. and that copies of the AI were available online and at various locations, and that a printout of the public notice detailing the availability of the AI was being handed out to anyone who needed it.

At 8:40 p.m. the public hearing was concluded.

Written Comments

The attached written comments regarding the Draft Baltimore Metropolitan Region’s Analysis of Impediments to Fair Housing were received from the following individuals and organizations, on or before February 1, 2012:

1. Naomi Binko
2. Kaitlin Brennan, Housing Development Coordinator, Main Street Housing, Inc.
3. Gregory Countess, Assistant Director of Advocacy for Housing & Community Economic Development and Tabinda Riaz, Staff Attorney, Maryland Legal Aid Bureau, Inc.
4. Maureen Daly
5. Mel Freeman, Executive Director, Citizens Planning & Housing Association, Inc.
6. John M. Greiner, Housing Policy Officer, Maryland Department of Housing and Community Development
7. Katherine Kelly Howard, Legislative Committee Chair, Maryland Multi-Housing Association, Inc.
9. Patrick Maier, Executive Director, Innovative Housing Institute, on behalf of the Baltimore Regional Housing Campaign
10. Brother Jerry O’Leary
11. Helene Perry
13. Barbara Samuels, Managing Attorney – Fair Housing, American Civil Liberties Union of Maryland
15. Lauren Young, Director of Litigation, Maryland Disability Law Center

Towson, MD 21204

SUBJECT: Baltimore Metropolitan Regional Analysis of Impediments to Fair Housing Choice

Dear Ms. Glen:

Thank you for the opportunity to comment on the Baltimore Metropolitan Regional Analysis of Impediments to Fair Housing Choice (AI). As you know, the State prepares a similar document for the State’s non-entitlement jurisdictions. In reviewing the regional AI, we have noted a number of factual errors in the regional document in regard to the operation of State programs which we feel are inappropriately included in the AI. In addition, we have some concerns about the amount of editorializing and leaps in logic that the regional AI contains, as well as some data issues. Some specific comments are below:

Qualified Allocation Plan and Federal Low-Income Housing Tax Credits

Starting on page 68 of the regional AI, the AI goes into a discussion of the Qualified Allocation Plan (QAP) for Federal Low Income Housing Tax Credits (LIHTC). This section of the regional AI contains numerous factual errors, as well as a significant amount of opinion that is presented as fact. We would strongly recommend that this entire section of the regional AI be deleted. However, if that does not happen, at a minimum the regional AI needs to address the following errors:

Factual Errors regarding the Qualified Allocation Plan:

On page 68, the regional AI says the State’s QAP is updated every year. This is factually incorrect. The QAP is reviewed periodically for updates and legislative changes, but several years can pass between updates to the QAP. This paragraph needs to be re-written to reflect this.

On page 69 of the regional AI, it says the “definition of elderly changed from 62 years of age in the 2010 QAP to 55...” This is factually incorrect. The QAP retained 62 as the definition of elderly. This entire point needs to be removed from the regional AI.

On page 69 of the regional AI it also says “the QAP eliminates the award of five points for applications for projects that serve applicants on public housing waiting lists”. Again, this is
factually incorrect. The use of public housing waiting lists was actually expanded in 2010, to include all sources of DHCD financing, not just LIHTC projects. It is not in the QAP because it has become a threshold requirement for all DHCD multifamily housing programs. This section of the regional AI gives the false impression that the standard was eliminated/lowered when the standard was actually raised. This entire section also needs to be removed from the regional AI.

Subjective Errors without Proof on the Qualified Allocation Plan:

We noted in the regional AI that there are a number of subjective positions in the document, without supporting facts or documentation to back it up.

For example, on Page 68 of the regional AI, the AI says the Baltimore Housing Regional Campaign (BHRC) felt the requirement for a local letter of government support was exclusionary. However, they did not provide any evidence that this was so. In fact, we would note that when BRHC and others asked that we eliminate the local government support requirement, the Disability Law Center in its comments pointed out that local government involvement in the review of TC properties can advance fair housing goals – they specifically cited the City’s requirement that all TC properties include units for persons with disabilities. This requirement has thus substantially adding to the amount of affordable housing, and specifically affirmatively furthered fair housing by expanding housing choice for persons with disabilities. Without local support requirements, this would not have happened. In addition, while the BHRC offers no evidence that projects are not funded, and the State has provided evidence that it far exceeded statutory goals for providing housing choice for persons of disabilities (see the State of Maryland’s 2010, 2009, 2008, 2007, 2006, etc. Annual Performance Report(s)) as well as greatly expanded the supply of affordable housing in general. We would recommend that this section of the regional AI be removed from the document. Conversely, if BHRC has proof that the local support letter was exclusionary, we ask 1) that that proof (such as a list of projects) be included in the regional AI and that 2) the regional AI explicitly describe efforts that will taken against units of local governments who use the requirement as an “exclusionary tool”.

The regional AI on page 69 states that BHRC felt more points should be awarded to projects in so-called “areas of opportunity”. We would note that these areas are not defined in statute or regulation for tax credit projects. We do note that the statute for tax credit projects DOES say that preference must be given to projects in Qualified Census Tracts (QCT) which have higher numbers of poor people. The document goes on to say that five points are awarded to “above average” areas of opportunity (defined in the QAP as communities with high scoring schools among other factors), but that “this is not enough”. Again, this is a subjective opinion. We received strong opposition from the BHRC request for 10 points for this section of the QAP from Baltimore City as well as other local groups interested in community revitalization efforts. With views on both sides of the issue, as well as a statutory requirement to favor QCTs, we left the standard as it was in the prior QAP. This section of the regional AI should be deleted. If this section of the regional AI is not deleted, at the very least the statutory requirement to favor projects in QCTs should be noted, as well as a discussion of the fact that Baltimore City and other organizations actively opposed BHRC’s proposal for the detrimental effect it would have on community revitalization efforts.
Lastly in this section there is a discussion of a Texas lawsuit regarding the State of Texas' QAP. We find it questionable that a Texas decision is included in a Baltimore Regional AI. More importantly, the suggestion that Maryland's allocation process and QAP may have resulted in the kind of segregation that is alleged in Texas is undisputedly false. The Texas case noted that 77 percent of the State's projects were in areas with a minority population of more than 50 percent. By comparison, only 35 percent of projects in Maryland were in communities with a minority population of more than 50 percent, a 42 percentage point difference. We also note that Maryland has numerous majority minority counties which curve Maryland's numbers upward, and that 74.2 percent of LIHTC projects in Maryland are in census tracts with very low poverty rates, so even projects in minority areas are NOT in poor areas. In addition, these statistics do not take into account factors such as rehabilitation or housing preservation versus new construction. When that is done, Maryland's numbers are even better. This section of the regional AI should be deleted. If this section of the regional AI is not removed, then it should at least be re-written and clearly explain and report that there is a 42 point difference in how projects are located in minority areas between the two States, with Maryland's QAP producing substantially better results and with a clear explanation of why it is still felt it is appropriate to include this in the AI given the vastly different results from the two State allocating agencies.

Local Contribution of Support

On the bottom of page 71, item #5, the regional AI states that "the local contribution of support" is an impediment to fair housing, but does not explain how. In our opinion, this has exactly the opposite affect, by making housing both more plentiful and more affordable. The local contribution of support allows DHCD to fund more projects, in more communities, providing more choice, funding more affordable housing since the Department’s resources can be spread across numerous developments rather than just a few. In addition, the local contribution reduces borrowing costs by the developer, resulting in lower rents and serving lower-income households. This should be removed from the regional AI. If not, the regional AI should clearly explain how the removal of the local contribution and resulting higher debt service on projects, along with less affordable housing both numerically and in terms of rent paid, will expand fair housing choice.

Other Issues:

We note that the regional AI often uses older data in its Analysis, much from 2008 and 2009 projections (sometimes even within the same section of the AI), when 2010 real time data is available. (Some portions, such as the disparity index use 2000 data, which changed substantially by 2010). Using 2008 unemployment statistics is also questionable, given that numbers come up monthly and are readily available through January 2012. Housing data for homeownership reflects 2008 prices and conditions. Again, this information is updated monthly. We would recommend the AI use updated data where possible/available, as it would present a more accurate (in sometimes different) picture that what is in the regional AI.
Thank you again for the opportunity to comment. Please feel free to contact me if you have any comments or questions.

Sincerely,

John M. Greiner

Subject: AI Comments

Questions

1. According to the AI, of the 11 cities (with populations exceeding 25,000) and the counties in Maryland for which dissimilarity indices were determined, Baltimore City ranks as the most segregated for the Black population. BNI stands poised to increase testing in communities where integration represents a barrier to residents seeking to live where they chose with access to better schools, increase employment opportunities and a safer community.

2. BNI is willing to contractually provide professional development to all essential Housing Authority of Baltimore City personnel in the area of Fair Housing and Tenant/Landlord rights.

Comments

3. What is your plan to address the recommendation outlined in the regional AI that entitlement jurisdictions consider expanding the participation of members of the protected classes on appointed boards and commissions?

4. How will you utilize your community partners with regards to responding to fair housing complaints given the budgetary limitations impacting the role of the city’s Community Relations commission?

Hello Ms. Wilkinson,

Attached you will find:

1) Comments on the AI from the BRHC related to Maryland's QAP and local approval and contribution requirement.

2) A copy of an administrative civil rights complaint with HUD, BRHC v. State of Maryland.

3) A copy of the BRHC's testimony that Patrick Maier delivered during the AI hearing on January 18th.

Please feel free to contact me if you have any questions.

Baltimore Region Analysis of Impediments to Fair Housing Hearing
January 18, 2012
City Hall, Room 215, 100 Holliday Street, Baltimore, MD 21202

Baltimore Regional Housing Campaign Testimony Points:

I am Patrick Maier, Executive Director of the Innovative Housing Institute and one of the founding members of the Baltimore Regional Housing Campaign. The Baltimore Regional Housing Campaign is noted in the AI as a leading group of advocates for the alignment of public policies and private investments to overcome racial and economic segregation and promote the right and means of all families to live in opportunity rich low poverty areas with high performing schools and economic prosperity. I am presenting this testimony on behalf of the BRHC.

The Analysis of Impediments as prepared by Mullin and Lonergan is a comprehensive and useful study. It accurately describes the region and the existing inequities in income, taxation, and access to affordable housing. The introduction to the regional profile notes the importance of overcoming the historic parochialism that has separated the jurisdictions of the region and asserts, correctly that economic disparity across the region weakens the entire region.

While the AI generally does a good job describing the problems/issues, it is weak on solutions, especially regional solutions-And it should be acknowledged that regional solutions are not easy to formulate and still harder to implement. However, the Baltimore region does not lack for positive examples of potential regional solutions- Notably- Thompson and Inclusionary Housing policies.

It should be made clear that the findings, recommendations and action plans in the Regional AI are incorporated in each of the county-specific Al’s, and that all are responsible for implementation. In the past, specific jurisdictions hid behind the 1996 Regional AI, but claimed its findings and recommendations did not pertain to their jurisdictions. As a result, few if any, of the impediments were addressed, and the 2002 action plan was never implemented. In particular, the 1996 AI found that racial segregation in the region’s public and assisted housing was an impediment to fair housing. That impediment was not eliminated or meaningfully addressed over the intervening years, and therefore must again be recognized in the Regional and jurisdiction specific Al’s as a serious impediment to fair housing.
The Regional AI highlights the lack of an intergovernmental infrastructure for planning and implementing regional solutions. We would like to help develop a regional Action Plan that to address the identified impediments. This may be embodied in the Regional Housing Plan to be developed as part of SCI Planning Grant. The plan must be concrete, with measurable outcomes and milestones.

Many of us were involved in the SCI grant, which includes budget and work items intended to help the process of building such an infrastructure. For example, part of the SCI grant will be used to hire a staff person to coordinate a regional response to the AI. We applaud and encourage this, and encourage the planning that will institutionalize this beyond the SCI grant. The Regional Housing Plan which is a required element of the SCI Planning Grant should act as a the regional guide to Affirmatively Furthering Fair Housing.

The State’s local approval requirement acts as a barrier to development in higher opportunity areas, and in some areas the local government response further exacerbates this barrier. The Baltimore County AI points out that BHTC project sponsors are required by the County to get support from local elected officials before the administrative officials will even meet with them or consider giving a resolution of local approval. The Baltimore Regional Housing Campaign has filed an Administrative Complaint with HUD on this matter and urges the governments of the region to join us and end this practice of requiring a special approval for the development of affordable housing that no other type of development is subject to.

Inclusionary Housing policies can be of substantial help in overcoming one of the major criticisms contained in the AI, namely creating opportunities in non-impacted areas for the development of mixed income housing. Because inclusionary housing is linked to the development of market rate housing, affordable housing is created in areas where the real estate market is strong, usually not areas where poverty or racial minorities are concentrated. Some of the Baltimore area jurisdictions currently have IH ordinances; it would be a great step forward as a region if Baltimore, Anne Arundel, and Harford Counties adopted inclusionary policies.

During this foreclosure crisis, the Baltimore Region has also missed a unique opportunity to acquire scattered site single family REO properties (and/or other properties languishing on the market) in higher opportunity areas that lack multifamily rental housing, and to restore these properties to productive use as affordable rental housing. Our neighbors in Montgomery County have made good use of Neighborhood Stabilization Program (NSP) funds for this kind of “REO to Rental” strategy. The NSP strategies of the Baltimore area suburban jurisdictions, in contrast, have ignored the acute and growing needs of low income families with children for family sized rental housing in areas served by good schools, choosing to focus their NSP programs only on homeownership or in a few cases, special needs rental housing. We urge the jurisdictions in the Baltimore region to adopt an REO to Rental strategy, focused on safe, family neighborhoods with strong schools, as part of their action plans. While these strategies need not wait for regional coordination, a coordinated approach to identifying and acquiring properties, perhaps including a regional financing fund and/or land bank, could be helpful and should be explored.
As is correctly noted by the AI, Source of Income laws that would prevent discrimination against households using housing choice vouchers at the local and State level would be of great benefit in Affirmatively Furthering Fair Housing. There is strong coalition working to pass such legislation at the General Assembly this year. Local adoption of SOI as a protected class as Howard and Montgomery Counties has done would send a strong message to the State and would open up areas of opportunity to families seeking affordable housing.

The Thompson mobility program is one of the concrete regional housing initiatives that the AI proposes. We believe it should be expanded, and urge the counties to consider adopting their own mobility counseling programs, as well as streamlining portability arrangements, adopting higher voucher payment standards and applying to participate in the HUD Small Area FMR demonstration.

Adoption of these AI’s and an implementation of the tasks listed in each, would help thousands of Maryland families and individuals gain access to quality affordable housing in low-poverty and high-opportunity areas.

The Baltimore Regional Housing Campaign is a ready partner for accomplishing these tasks, especially those related to the work necessary to create and provide access to affordable housing in areas of opportunity. With the receipt of the Sustainable Communities Planning Grant and the development of a Regional Housing Plan there is an unprecedented opportunity for the jurisdictions of the region to move forward together and overcome the racial and economic divisions of the past.

Jurisdictional Testimony Points: Baltimore County

The planning and development approval processes in Baltimore County do not take into consideration the duty to affirmatively further fair housing. The processes need to be revamped so that affordable housing provision in high opportunity areas can occur.

The County would greatly benefit from the development of an inclusionary housing policy that would work in tandem with the development of market rate housing to provide housing affordable to low and moderate income households.

The requirement that Low Income Housing Tax Credit developments be pre-approved by a Council Member before a dialogue is started with County Staff is unbelievable. This requirement effectively sanctions “nimbyism” as the Council member for a given district is not likely to support affordable housing development over the objections of his constituents.

While the County’s focus on redevelopment is laudable to a certain degree, it places two thirds of the County “off limits” to the development of affordable housing, including the more affluent and/stable neighborhoods with the strongest schools, and even from areas designated for new residential growth. If there was more evidence of successful transit oriented mixed income development, and balanced development in higher opportunity and redevelopment areas resulting from the County’s strategy, the focus on redevelopment might be a valid approach. But the County has
excluded affordable rental housing for families from its east side redevelopment projects, and not taken the steps to include affordable housing in its Owings Mills TOD project. It has excluded both affordable housing and transit from the development of the Honeygo growth area. Further, the County has failed to create strong incentives for mixed income, inclusionary development which will require land acquisition and significant public funding to make possible.

The dramatic disparity in tax rates between Baltimore County and Baltimore City identify the possibility that the County could do significantly more to provide local funding for the development of affordable and mixed income housing in high opportunity areas. The establishment of a local Housing Trust fund would be a good start.

Jurisdictional Testimony Points: Anne Arundel County

The lack of a Fair Housing Ordinance in Anne Arundel County bespeaks the lack of political will to affirmatively further fair housing. The inability to enforce the County’s human rights protections or to conduct fair housing testing further demonstrates this absence.

Similarly, the County’s failure to zone for higher density multi-family housing is an impediment to fair housing. As noted by the AI, the failure to zone for medium or high density residential use in the Ritchie Highway corridor is especially egregious since this is a transit corridor zoned for a variety of uses. It not only offers access to jobs in Annapolis and Baltimore, but also the many excellent educational and job training programs offered by Anne Arundel Community College.

As a result of the county’s zoning policies and reluctance to give local approval for LIHTC projects, there has been little or no construction of LIHTC housing for families in Anne Arundel County over the past 15 years. The one LIHTC project approved and constructed in this central corridor of the County during the past 10 years was approved for elderly-only housing.

The County would greatly benefit from the development of an inclusionary housing policy that would work in tandem with the development of market rate housing to provide housing affordable to low and moderate income households.

Despite the recent change to the zoning ordinance that permits the development of multifamily housing, including affordable housing in certain commercial and industrial zones, the failure to require the inclusion of affordable housing in all new market rate developments means that low and moderate income households will continue to be segregated from areas of high opportunity.

We agree strongly with the findings made in regard to Anne Arundel and other suburban jurisdictions that the jurisdictions lack civil rights site selection standards for their HOME investments. We likewise concur with the recommendation that in developing policy priorities for entitlement investment in affordable housing, that Anne Arundel and the other counties should give first consideration to the use of CDBG and HOME funds for new family rental housing on sites outside of impacted areas.

3RHC c/o CPHA, 3355 Keswick Road Suite 200, Baltimore, MD 21211
410-539-1369 x107
Households with disabilities made up the majority of discrimination complaints filed in Anne Arundel County. The lack of new multi-family housing compliant with ADA accessibility requirements and incorporating affordable housing is evidence of the County’s failure to plan for the provision of affordable, accessible housing. This results in an outmoded housing stock that is inaccessible and unaffordable.

The dramatic disparity in tax rates between Anne Arundel County and Baltimore City identify the possibility that the County could do significantly more to provide local funding for the development of affordable and mixed income housing in high opportunity areas. The establishment of a local Housing Trust fund would be a good start.

About the Baltimore Regional Housing Campaign

The Baltimore Regional Housing Campaign envisions a Baltimore region where all families have the right and the means to live in high opportunity communities with excellent schools, economic prosperity, and low rates of poverty, and where public policies and private investments are aligned to overcome historic divisions by race and class.

Amy E. Wilkinson  
Housing Authority of Baltimore City  
417 E Fayette Street  
Baltimore, MD 21202

Dear Amy Wilkinson,

On behalf of the Baltimore Regional Housing Campaign (BRHC) I am writing to urge the Baltimore regional jurisdictions to include the local approval and contribution requirement of the State’s Qualified Allocation Plan (QAP) as an impediment to fair housing in each of the five grantee’s Analyses of Impediments to Fair Housing.

The BRHC is pleased that the local approval and contribution requirement of the QAP has been identified as an impediment to fair housing choice for the region. As further described in the Regional AI and the Baltimore County AI, this requirement is an unnecessary platform for opposition to locating LIHTC and other state funded housing in areas of opportunity. Each of the grantees should take steps, individually as well as jointly, to support the elimination of this impediment, and to ensure that its own local processes do not impose further barriers to the development of affordable family housing in areas of opportunity.

As you may know, the BRHC has filed an administrative civil rights complaint with HUD. BRHC v. State of Maryland, similarly alleging that the terms of the State’s QAP, and in particular the local approval and contribution requirement, are an impediment to fair housing. For details about this complaint, please review a copy of the complaint, which is being submitted to you by email along with this letter.

Sincerely,

Mel Freeman, Executive Director  
Citizens Planning & Housing Association, Inc.

Pursuant to the Fair Housing Act, Title VI of the Civil Rights Act of 1964 and Section 109 of the Housing and Community Development Act of 1974, this complaint challenges the State of Maryland’s policies and administration of the Low Income Housing Tax Credit program in a fashion that permits municipal governments to veto the placement of affordable housing for families in high-opportunity communities. The effect of the policies and actions described below has been to discriminate against minority families and to perpetuate racial and ethnic segregation in the Baltimore region. Without HUD intervention, this decades-long continuing pattern and practice of discrimination and segregation will continue, to the detriment of the Complainant and people of color in the Baltimore region.
The Baltimore Regional Housing Campaign (BRHC) is a Baltimore-based, non-profit coalition that works toward a common vision of the Baltimore region\(^1\) where public policies and private investments are aligned to overcome historic divisions by race and class and where all families have the right and the means to live in high-opportunity communities\(^2\) with excellent schools, economic prosperity and low rates of poverty. Its members include the Citizens Planning and Housing Association, Inc., BRIDGE, Inc., the Greater Baltimore Urban League, Innovative Housing Institute, Poverty & Race Research Action Council and the Maryland American Civil Liberties Union.

Since 2005, the BRHC has worked to promote and implement a range of strategies for increasing affordable housing and opportunities for low-income families throughout the region. Its members have supported innovative strategies to increase housing choice, advocated policies that permit the broader use of housing vouchers to promote integrative moves throughout the region and attracted philanthropic investment in enhancements of the regional housing mobility program.

BRHC members provide a range of education, referral and advocacy services to assist low- and moderate-income home seekers to expand their housing choices and to support their ability to move to high-opportunity communities. Exhibit #1 [Map: Comprehensive Opportunity Index for the Baltimore Region] provides a visual description of high- and low-opportunity communities as of June 2005. The policies and practices complained of herein have perceptibly impaired and frustrated the ability of BRHC members to provide these services in the Baltimore metropolitan area and required them to divert their limited resources to investigate and counteract the discriminatory and segregative effects those policies and practices have had on the housing choice of minority families.

2. Other Aggrieved Parties

Residents of metropolitan Baltimore, Maryland who because of their race, color or national origin have been subjected to the discriminatory effects of practices and procedures established by the Department of Housing and Community Development of the State of Maryland ("DHCD") for the allocation of Low Income Housing Tax Credits (LIHTC) in Maryland.

---

\(^1\) BRHC defines the "Baltimore region," both for its work and for purposes of this complaint, as including the Maryland counties of Anne Arundel, Baltimore, Carroll, Harford and Howard, and Baltimore City.

\(^2\) For purposes of this complaint, the term "high-opportunity communities" means those communities with high-quality housing, ready access to good schools, high-quality public services, access to employment, transportation, health care and commercial services and amenities. Such communities are also typically characterized by low crime and poverty rates. "Low-opportunity communities" are defined by the absence or dearth of these qualities.
3. The following is alleged to have occurred or is about to occur:

Through its DHCD, the State of Maryland (State) has adopted, maintained and enforced policies and practices in the LIHTC program that have the effect of limiting the development of affordable housing for families with children in high-opportunity, majority White communities and concentrated such units in low-opportunity communities characterized by racial segregation and poverty. DHCD is also the State agency that has received and administered more than $117 million in federal housing and community development funds since 2005. Adoption, maintenance and enforcement of the policies and practices described below violate the State’s multiple express and implied certifications to the U.S. Department of Housing and Urban Development (“HUD”) that it will comply with Title VI, the Fair Housing Act and the obligation to affirmatively further fair housing, pursuant to 42 U.S.C. §§3608 and 5304(b) and other federal authorities.

The State’s latest discriminatory housing practice occurred on January 24, 2011, when DHCD adopted its 2011 Qualified Allocation Plan (“QAP”) and adopted and issued its Multifamily Rental Financing Program Guide (“Guide”) as an attachment to the 2011 QAP. The QAP is attached hereto as Exhibit #2, and the Guide is Exhibit #3. The adoption of the QAP and the Guide also constitute the latest actions in a continuing pattern and practice of disparate impact discrimination on the basis of race, color and national origin extending back beyond 2005.

Specifically, BRHC alleges herein that the State of Maryland’s “Local Government Support and Contribution” threshold requirement, contained in Section 3.3 of the Guide, has a disparate impact on the basis of race, color and national origin, inasmuch as it (1) is inconsistent with the local-involvement standard set out in the Internal Revenue Code for the LIHTC program, (2) establishes an institutional mechanism for local “NIMBY” opposition to LIHTC housing without regard to the worthiness of the project, (3) allows local governments a pocket veto over LIHTC allocations, (4) deters developers from even considering sites in communities resistant to affordable housing and, as a consequence, (5) constitutes an impediment to fair housing that is clearly in violation of Maryland’s certification under the Fair Housing Act that it will affirmatively further fair housing (“AFFH”) and comply with the FHA.

This complaint is brought to enforce the State’s duty to comply with its civil rights obligations, which are a precondition to the receipt of federal funds. Specifically, this complaint challenges the “Local Government Support and Contribution” requirement. Exhibit #3, at 11-12. Pursuant to DHCD’s “Project Threshold Criteria,” LIHTC “[a]pplications must include...a final resolution from the governing body of the local jurisdiction in which the project is located [and] ... the application must also include evidence of a local contribution for the project.” Id. at 11. As the State is fully aware, this policy permits local government officials and neighborhood opponents to veto
the placement of LIHTC affordable housing developments in high-opportunity communities.

In fact, this policy permits local governments in predominantly White communities in the Baltimore metropolitan area to exercise a "pocket veto" of LIHTC affordable housing proposals because the mere withholding of approval or local funding will effectively prevent an application for LIHTC from going forward. It also operates to severely chill the interest of any developer in proposing LIHTC affordable housing for families with children in most high-opportunity communities in the Counties of Anne Arundel, Baltimore, Carroll, Harford and Howard.

The effects of the DHCD policy can be seen starkly in the geographic concentration of LIHTC developments developed in the Baltimore metropolitan region from 1987 to the present. When high-opportunity, majority White communities pocket veto LIHTC affordable housing, it tends to be located in segregated and disadvantaged communities where local resistance is substantially less. BRHC has commissioned original research, using data derived from 2010 Census redistricting data, the HUD National LIHTC database (1987-2007) and Maryland DHCD LIHTC allocations data. Findings for the Baltimore metropolitan region are presented in Exhibit #4 [Abt Data Tables] and Exhibit #5 [Abt Maps]. BRHC's research suggests that at least 56 of 99 LIHTC family projects, comprising 4,130 units, were built in census tracts with African-American populations of more than 50%, and that at least 60 of those 99 projects were built in census tracts with more than 20% of the population living below the poverty level.

Even when LIHTC family projects are located the higher-opportunity, suburban jurisdictions of Anne Arundel, Baltimore, Carroll and Harford counties, they are often located in pockets of racial and ethnic segregation and pockets of poverty. As a consequence, BRHC alleges, on information and belief, that children living in those projects must attend elementary schools that are higher-poverty and lower-performing (as measured by FARM rates) as compared to other schools in those jurisdictions.

Prior to the State's adoption of the QAP and Guide, BRHC members submitted formal comments to DHCD outlining the discriminatory impact of the local support and contribution requirement and specifically requested that the State rescind this requirement in order to comply with its civil rights obligations. The State affirmatively refused to do so and continues to enforce the policy, to the detriment of BRHC and people of color in the Baltimore metropolitan area. In other words, the State has, in violation of 42 U.S.C. §§ 3604(a) and 3605(a), perpetuated and will continue to perpetuate segregation on grounds of race, color or national origin by requiring local government support and contribution as a condition for receiving an allocation of Low Income Housing Tax Credits. See Exhibit #6 [Barbara Samuels/BRHC letter to Patricia Rynn Sylvester,
December 16, 2010]. Without comment or response, the State adopted the QAP and Guide five weeks later.

Since 2005, the State has received at least $117,173,131 in grants from HUD, in the following categories:

<table>
<thead>
<tr>
<th>YEAR</th>
<th>CDBG</th>
<th>HOME</th>
<th>ESG</th>
<th>HOPWA</th>
</tr>
</thead>
<tbody>
<tr>
<td>2005</td>

<td>$4,242,992</td>
<td>$2,548,843</td>
</tr>
</tbody>
</table>

As a consequence of receiving those funds, it has an obligation not merely to refrain from discrimination (whether intentional or through disparate impact), but also to affirmatively further fair housing. 42 U.S.C. §§3508(e)(5), 5304(b)(2), 12705(b)(15); 24 C.F.R. §§91.425, 570.487(b). This means that DHCD should have identified racial segregation in the metropolitan Baltimore market as an impediment to fair housing, collected information about the impact of the local approval and local contribution requirements on such segregation, and taken steps to ameliorate any discriminatory effects.

4. The alleged violation occurred because of:

Race, color and national origin
5. **Address and location of the property in question (or if no property is involved, the County and state where the discrimination occurred):**

   The Maryland jurisdictions of Baltimore City, Anne Arundel County, Baltimore County, Carroll County, Harford County and Howard County.

6. **Respondents:**

   State of Maryland

   and

   Raymond A. Skinner, Secretary
   Department of Housing and Community Development of the State of Maryland
   100 Community Place
   Crownsville, MD 21032 – 2023

7. **The Violations Alleged:**

   a. **Overview**

      Pursuant to 42 U.S.C. § 3610 of the FHA, BRHC alleges that in enacting and enforcing a local approval and funding requirement as a condition for receiving Low Income Housing Tax Credits, the State of Maryland has made it more difficult for developers to locate low-income housing in predominantly White neighborhoods and thus more difficult for BRHC, its members and people of color to find Section 8 participating housing in those areas.

      Complainant has diverted its resources to identify and investigate this violation of the FHA; as a result, BRHC’s mission of overcoming the historic divisions of race and ensuring that all persons have the right and means of living in areas of high opportunity in the Baltimore metropolitan area has been frustrated. The ability of BRHC’s coalition members to provide services in parts of the Baltimore metropolitan area which would otherwise have assisted in the desegregation of those areas has been perceptibly impaired.
b. Background

In addition to being the state agency that administers the above-referenced federal funds for non-entitlement jurisdictions in Maryland, DHCD is also authorized to allocate the tax credits for residential rental projects in Maryland. The Secretary of DHCD has assigned this function to the Community Development Administration, an agency in the Division of Development Finance of DHCD. Applicants for LIHTC must agree that the low-income units in the project will be rented to families with incomes and at rents that do not exceed these levels.³

Federal law requires Maryland to adopt a Qualified Allocation Plan (QAP) to allocate the tax credits to projects based upon the state’s priorities and federal mandated requirements. The QAP sets forth the selection criteria established by the Community Development Administration for allocating Tax Credits. The determination of whether a project is eligible to receive an allocation of tax credits rests solely with the Community Development Administration and is based upon the project owner’s compliance with the Code and the criteria in the QAP.⁴

Among the threshold requirements in the QAP is the “Local Government Support and Contribution” requirement. This provision requires either a final resolution from the governing body of the local jurisdiction or a letter of support from the highest elected official of the local jurisdiction in which the project is located, plus, for a project seeking competitive financing, the application must also have evidence of a local contribution or, otherwise stated, a local subsidy for the building of the affordable housing.⁵ There is no state statute or regulation that expressly imposes a local approval and/or contribution requirement on the state’s allocation of federal subsidies or LIHTC tax credits, and the QAP itself does not contain such requirements. To Complainant’s knowledge, there is no formal or informal opinion of the Attorney General on this subject.

³ The housing units must be set aside for low- and moderate-income residents for an initial compliance period of 15 years. The Code requires the project owner to enter into an extended agreement under which the low-income housing set aside, the rent restrictions and other requirements must continue for an additional 15 years. A project owner may opt out of the restrictions after the initial 15 years if under certain circumstance provided for under the Code.

⁴ Maryland Department of Housing and Community Development, Maryland Low Income Housing Tax Credit Program: 2011 Qualified Allocation Plan, January 24, 2011 at 1-3.

⁵ Acceptable forms of contributions include, but are not limited to, a donation of land, waiver of local fees for permits, real estate tax abatements, or an agreement to provide services such as trash collection, without cost. Maryland Department of Housing and Community Development, Multifamily Rental Financing Program Guide, January 24, 2011, at pp. 11-12.
The local contribution/approval requirement makes it easy for local governments, including those responding to citizen opposition to the placement of low- and moderate-income housing for racial reasons, to block such housing. The state policy permits a municipality to withhold local approval or contribution without any formal announcement. Nor does it require the locality to offer any reason, let alone a non-discriminatory reason, for withholding support.6

c. The State's Use Of the Local Government Support and Contribution Requirement In the Awarding of Low Income Housing Tax Credits Has Had and Predictably Will Continue To Have A Disparate Impact on Persons Protected by the FHA

i. The State’s Local Contribution/Approval Requirement Discourages the Construction of Affordable Family Housing in Predominantly White Areas And Thereby Has Had and Predictably Will Continue to Have An Adverse Impact On Persons Protected by the FHA

The State’s adoption and enforcement of the Local Government Support and Contribution requirement has resulted in fewer applications and approvals for proposed family developments in predominantly White areas of the Baltimore region. Although data describing the race, ethnicity and other characteristics of individual LIHTC developments has not yet been released by the state of Maryland, BRHC believes that it will show that elderly/disabled LIHTC properties likely have smaller minority populations than family LIHTC properties, which may account for their ability to locate with somewhat greater ease in higher-opportunity communities.

As BRHC has heard from many developers, the local approval and contribution requirement is, in effect, a pocket veto, easily exercised by local officials based on the exclusionary views of some citizen opponents (or merely the fear that the project will stir up exclusionary opposition), which deters developers from expending resources in areas where they know it will be futile to seek local approval based on their own past experience, or the experience of others in the industry. Even though the State has failed to do so, at least one jurisdiction that has historically resisted LIHTC housing for families

---

6 The local contribution/approval requirement also fails to provide any means by which supporters of affordable housing, and families who might benefit from it, can express their support. As the Presidential Commission on Regulatory Barriers to Affordable Housing pointed out, “Those advocating more affordable housing in a community cannot, in the same way, point to a precise location on the map where benefits of affordable housing are being deliberately withheld and particular households are being disadvantaged.” Not in My Backyard: Removing Barriers to Affordable Housing, Report to President Bush and Secretary Kemp by the Advisory Commission on Regulatory Barriers to Affordable Housing, (1991) at 2-1
actually recognizes that these State-imposed requirements constitute impediments to fair housing choice.\(^7\)

The State’s threshold local approval/support requirement has conveyed to non-profit and for-profit developers alike that it would be futile to propose building affordable LIHTC family housing in many high-opportunity neighborhoods in the Baltimore metropolitan area. BRHC has been in contact with a number of developers who have indicated that they have not pursued such development opportunities because they knew that their inability to secure local approval and support in higher-opportunity areas would have resulted in the rejection of their applications.

One medium-size developer involved in affordable housing development and management provided written comments following the 2011 public hearing on the State’s QAP, saying, in part:

I am one of a number of developers who would seize the opportunity to create more affordable housing in the counties, in so-called areas of opportunity.... I believe it is essential to the legislative mandate of affirmatively furthering fair housing that the local resolution requirement be eliminated.... Our company has a management affiliate which manages some of the Thompson units in the counties. For the most part, our residents love their new homes in areas where they have access to jobs and better schools for their children. They left City neighborhoods because they wanted to; not because they were forced to. I only think it fair that others like them should have the same opportunities.

Other developers have echoed those concerns:

- Writing in a prominent industry publication, one of Maryland’s largest non-profit developers expressed frustration with the effects of the local support/contribution requirement: “The local approval and local contribution are treated as threshold requirements by the state, and applications are not accepted without them, thus giving local governments complete control over what can be considered for funding.”

- A Maryland developer testified at the 2011 QAP public hearing about an affordable family project that was well-advanced in the planning process, but had to be withdrawn because opposition from neighbors convinced the municipality not to provide a letter of support.

\(^7\) Analysis of Impediments to Fair Housing Choice – Baltimore Metro Area, Baltimore County, Interim Draft #2 prepared by Mullin & Lonergan Associates (September 2010) at 52.
• Additional testimony was given at the 2011 QAP public hearing about a gentrifying neighborhood in the City of Baltimore in which neighbors were able to block LIHTC funding for affordable housing rehabilitation by convincing the City not to offer local support.

• An out-of-state developer initially secured a letter of support and a pledge of financial contribution from a municipality, only to have it withdrawn when neighbors loudly expressed their opposition to affordable rental housing.

Because their success depends on maintaining good relations with State and local officials, these developers are understandably reticent about being named in this civil rights complaint, but BRHC believes one or more would be willing to talk with HUD about their experiences.

Similarly, because these developers need to maintain good relations, none has forced the issue with respect to an attempt to develop housing in a high-opportunity community when it was made aware that such development could not garner public support or local contribution. This should not be a barrier to HUD considering the impact of the State’s threshold requirement, inasmuch as the U.S. Court of Appeals for the Fourth Circuit has recognized that there are circumstances in which an injured party need not submit an application when doing so would be a “futile gesture.” *See Pinchback v. Armistead Homes Corp.*, 907 F.2d 1447, 1451 (4th Cir. 1990). In similar circumstances in the employment context, the U.S. Supreme Court has recognized that such a person is “as much a victim of discrimination as is he who goes through the motions of submitting an application.” *Int’l Bhd. of Teamsters v. United States*, 431 U.S. 324, 365-66 (1977).

BRHC’s analysis demonstrates that LIHTC units are disproportionately unavailable in White areas, which often have higher performing schools. A mere 13.5% of the total LIHTC family units in the Baltimore region (1,345 apartments) are found in predominantly White (70% to 100%) census tracts.

The scarcity of affordable housing in predominantly White census tracts is also starkly illustrated when the location of the LIHTC family projects are placed on a census tracts map showing the percent minority population of the census tract. Few LIHTC projects can be found in census tracts with minority populations of less than 30%. *See Exhibit #5, Map 1 -1, LIHTC Family Projects by Census Tract Percent Minority (2010) Baltimore Region.*

---

8 Exhibit #4, Table 1-3 - LIHTC Family Projects by Census Tract Percent Minority Baltimore Region.
Of equal concern are BRHC’s findings that there are fewer LIHTC units in low
poverty, higher opportunity areas than would be expected. While 49.7% of all rental
units in the metropolitan Baltimore area are located in low poverty, higher opportunity
census tracts (with fewer than 10% of the census tracts population below the poverty line)
only 33.1% of the LIHTC family units are located in such areas. In the Baltimore
metropolitan region, 48.03% of low- and moderate-income households eligible for
LIHTC units (defined as those at or below 60% of area median income) are African-
American or Latino.9 The relative scarcity of affordable units in predominantly White
areas has a disproportionately adverse impact on minorities who seek to reside in these
areas and who qualify for affordable housing.

Here the persons predictably affected by the local support requirements are those
who are located in the housing market in issue and who would qualify for the affordable
housing. The geographic area from which most residents would be drawn for a
development is the metro Baltimore area. The maximum income cut-off for households
who would qualify for affordable housing are those that meet the standard for
participating in the program, namely households earning less than 60% of the area
median income which in the Baltimore metro area for a family of four is $49,260 10
Approximately 28.40% of all Baltimore metro area families earn less than $49,260 and
therefore would qualify. In comparison, 48.36% of all African American families in the
Baltimore metro area earn less than $49,260 and would therefore qualify for the program.

Similarly, 40.46% of all Latino families earn less than $49,260 and therefore
would qualify.11 The racial disparity is significant for both African Americans and

9 See nn. 11, 12.

Latinos.\textsuperscript{12}

The State’s Local Contribution/Approval Requirement Perpetuates Segregation.

By the most commonly used measure of residential segregation between two groups, the dissimilarity index, which reflects the relative distributions across neighborhoods within a city or metropolitan area, the White/ African-American dissimilarity index for metropolitan Baltimore, at 71.8\%, is high.\textsuperscript{13}

This high level of residential segregation is the result of a historic pattern of the greatest concentration of African Americans in Baltimore City and extending outward in Baltimore County in a northwesterly direction towards Randallstown and westerly toward Woodlawn. The outer areas of Metropolitan Baltimore, where LIHTC housing is limited, has far lower percentages of African Americans living there. This historic residential racial segregation has been brought about by the deliberate policies of government at the local, state and federal levels, which has been reproduced in the housing market.\textsuperscript{14}

Despite this historical pattern of racial segregation, BRHC’s analysis shows that 47\% of the total LIHTC family and elderly units in the entire Baltimore metropolitan area have been sited in overwhelmingly minority (70\% to 100\%) census tracts.\textsuperscript{15} Separating out LIHTC family units shows a similar result that 43.7\% of the total of the family units in metropolitan Baltimore are in the already highly concentrated, minority (70\% to 100\%) census tracts.\textsuperscript{16}

\textsuperscript{12} The disparate impact is no less if looked at on a county-by-county basis within metropolitan Baltimore. Table 1: Percent of families with income below $49,999 by county (median income is $49,260)

\begin{tabular}{|c|c|c|c|c|c|}
\hline
 & Anne Arundel & Baltimore City & Baltimore County & Carroll & Harford & Howard \\
\hline
Total & 20.83\% & 43.85\% & 28.98\% & 20.19\% & 22.73\% & 13.77\% \\
\hline
African-American & 35.32\% & 62.46\% & 41.04\% & N/A & N/A & 23.65\% \\
\hline
Hispanic & 37.68\% & 48.54\% & 43.81\% & N/A & N/A & 37.58\% \\
\hline
\end{tabular}

\textsuperscript{13} \url{http://www.censusscope.org/us/print_rank_dissimilarity_white_black.html} Baltimore has the 44\textsuperscript{th} highest dissimilarity index among the 318 metropolitan areas measured by the United States Census.

\textsuperscript{15} Exhibit \#4, Table 1-9 LIHTC Family and Elderly Projects by Census Tract Percent Minority Baltimore Region.

\textsuperscript{16} Exhibit \#4, Table 1-3 LIHTC Family Projects by Census Tract Percent Minority Baltimore Region.
The role that DHCD’s placement of LIHTC projects has played in perpetuating segregation is not unknown to the State. In 2005, the Kirwan Institute of Ohio State University analyzed the location of Maryland LIHTC projects placed in service in prior years. Their findings are summarized in the comments submitted by the Maryland Legal Aid Bureau, the Lawyers’ Committee for Civil Rights Under Law, and the Poverty and Race Research Action Council on Maryland’s 2005 Draft QAP:

As set out in the accompanying maps, the past pattern of LIHTC siting in Maryland reinforces patterns of metropolitan segregation by channeling LIHTC funds --- and the predominantly minority and low and moderate income families who disproportionately need such subsidized housing --- into more segregated, higher poverty neighborhoods and school districts.\(^\text{17}\)

Again in 2009, a HUD study of LIHTC project placement in metro Baltimore showed pronounced placement of LIHTC units in areas that were 50% or greater minority. The HUD Report said that 48% of the LIHTC units in the Baltimore metro area were in areas that were 50% or greater minority as compared to only 35% of the rental units overall.\(^\text{18}\) A 2006 report done by Abt Associates for the Poverty & Race Research Action Council determined that only 24.7% of LIHTC family units were located in low-poverty Census tracts in the Baltimore region, and only 34.4% of LIHTC family units were located in areas where the “percent minority” was below the regional average minority population.\(^\text{19}\)

---

d. The State’s Analysis of Impediments Does Not Comply With Federal Law.

   i. The State’s Civil Rights Obligations as an Administrator of Federal Funds

   Before receiving CDBG and related funding, the State must certify that it “will affirmatively further fair housing.” Under federal regulations, this means that the State must truthfully certify that it (1) has or will “conduct an analysis to identify impediments to fair housing choice within the [area]”; (2) “take appropriate actions to overcome the effects of any impediments identified through that analysis”; and (3) “maintain records reflecting the analysis and actions in this regard.” 24 C.F.R. §§ 91.225(a)(1), 570.601(a)(2). These required action steps are clear mandatory obligations of any entitlement jurisdiction once it completes the AFFH certification.

   ii. The State Has Failed to Identify and Analyze the Local Approval Requirements as Impediments to Fair Housing.

   The State has disregarded its affirmative obligations to identify and analyze all existing impediments to fair housing choice experienced by the people of Maryland because of race, color and national origin. The 2010 AI is substantially incomplete because it fails to conduct a thorough identification and analysis of the local approval and contribution requirements as impediments existing in the state.

   Despite the starkly racial conclusions reached in the 2005 by Kirwan Institute and in 2009 by HUD’s study of the State’s placement of LIHTC units DHCD has never publicly released a similar analysis of the results of its QAP policies and project selection decisions. In particular, there is no evidence that a meaningful analysis of LIHTC project selection and placement has been conducted as part of the state’s fair housing planning responsibilities pursuant to 24 C.F.R. 570.487(b).20

---

20 It does not appear that the state has ever examined state level policies or produced a state level Analysis of Impediments to Fair Housing (AI) as required by 24 C.F.R. 570.487(b). A document identified as an AI for the rural non-entitlement jurisdictions of the state is posted on the Departments website. It is not clear whether this is a draft or final document. Analysis of Impediments to Fair Housing Choice for Maryland Non-Entitlement Communities (April 2010). http://www.dhcd.maryland.gov/Website/About/PublicInfo/Publications/documents/Fair_Housing_Choice_Impediments.pdf (last accessed August 1, 2011).
As its title suggests, the state’s April 2010 Analysis of Impediments to Fair Housing In Maryland’s Non-Entitlement Communities looks only at the location of LIHTC projects in relation to areas of minority concentration in the non-metro counties. Only 10% of the LIHTC units in Maryland are located in non-metro areas. The remaining 90% of LIHTC units, as well as the bulk of the state’s minority population and areas of minority concentration, are located in the Washington, D.C. and Baltimore-Towson metropolitan areas. They should have been, but were not, included in this analysis. Had DHCD conducted an appropriate analysis of the location of LIHTC units, as has the Complainant, the data would have supported the conclusion that the State is perpetuating racial segregation and discrimination through the allocation of low income housing tax credits and that DHCD alter or eliminate these requirements as has been recommended by Governor O’Malley and Lt. Governor Brown’s transition team.

Conclusion

Under all applicable laws and regulations, the Secretary has the authority to review the claim of discriminatory impacts of the state’s LIHTC Local Government Support and Contribution requirement. The Secretary also has the obligation and responsibility to review the State of Maryland’s submissions and certifications in application for funds and to enforce compliance with CDBG program requirements and the intent of Congress.

For the reasons set out above, the Complainant asks HUD to find the respondents Local Support and Approval requirement in violation of 42 USC §3604, and to deem the State of Maryland’s affirmatively furthering fair housing certification insufficient to support obligation of CDBG funds at this time, and require revision of the AI and certifications in accordance with applicable federal laws and regulations. Complainant seeks declaratory and injunctive relief with respect to the State’s violations of 42 U.S.C. §§ 3604(a) and 3605(a), together with all other relief that may be available pursuant to the Fair Housing Act, including reasonable attorneys’ fees and costs.

21 Supra fn. 18 at Exhibit A3.

8. The most recent date on which the alleged discrimination occurred:

Ongoing as of the date this Complaint was submitted.

9. Types of Federal Funds identified:

Community Development Block Grant, HOME Investment Partnership, Emergency Shelter Grants, Housing Opportunities for People with AIDS

10. The acts alleged in this complaint, if proven, may constitute a violation of the following:

Title VI of the Civil Rights Act of 1964.
Section 109 of Title I of the Housing and Community Development Act of 1974.

Dated: August 30, 2011

Dear Ms. Wilkinson and Ms. Glenn:

The Homeless Persons Representation Project submits the following comments to the Analysis of Impediments to Fair Housing Choice for Baltimore City, Baltimore County and the Region. We also support the comments made at the January 18, 2012 public hearing by the Maryland Legal Aid Bureau, ACLU, Maryland Disability Law Center, Baltimore County Branch of the NAACP, and the Baltimore Regional Housing Campaign.

The AI fails to address impediments to fair housing choice encountered by people experiencing homelessness.

The Draft AI fails to discuss housing discrimination and impediments to fair housing choice experienced by individuals and families who are homeless, despite the fact that the homeless population is comprised almost entirely of protected classes: African Americans; families with children; and people with disabilities.¹

When local jurisdictions make funding decisions about housing for people who are homeless (including shelters, transitional, and permanent housing), fair housing issues are typically not discussed. The City AI points out that funding decisions related to HOME and CDBG currently don’t consider how projects will affirmatively

¹ While 63% of the City’s population is Black, 80% of sheltered homeless and 85% of unsheltered homeless are Black. Likewise, 27.5% of Baltimore City’s population reports at least one type of disability, but 39% of sheltered homeless report a disability. See Counting Matters: Baltimore City Homeless Point-in-Time Census Report, 2011.
further fair housing (AFFH) and recommends making those decisions in the future through a fair housing filter. However, the duty to AFFH is not limited to how the jurisdiction uses its HOME and CDBG funds. Decisions related to the use of other funds, including federal McKinney-Vento money and local jurisdiction general funds, that are used to create shelters, transitional housing, rapid re-housing, and permanent supportive housing must also be put through a fair housing filter. Individuals who are members of protected classes and also happen to be homeless must also be provided fair housing choice and opportunities to live in integrated settings in the community in areas of low-poverty and low-minority concentration.

There is also a need to educate and train staff that manage and operate shelters and housing programs for people who are homeless on fair housing laws. Individuals and families continue to face discrimination in shelters and housing programs for people who are homeless. The most common form of discrimination is against people with mental illness. We continue to see discrimination occurring in these housing programs in the context of admissions, program rules, terminations, and refusals to grant reasonable accommodations. Providers that operate these sorts of housing programs, particularly those under contract with the local jurisdiction, should be required to obtain training for staff, have written fair housing and reasonable accommodation policies, and provide fair housing education to the residents in their programs.

In addition, the AI does not fully address the issue of NIMBYism as an impediment to fair housing choice. We continue to see NIMBY issues arise in the siting of shelters, transitional and other forms of housing for people who are homeless or formerly homeless. Public officials, both elected and appointed, must take a more proactive approach against NIMBYism and break down stereotypes and educate communities on fair housing.

A state law prohibiting source of income discrimination and reforms in the Low Income Housing Tax Credit program are critical to furthering fair housing choice in the region.

We strongly support the finding in the AI that Housing Choice Vouchers are an effective way to de-concentrate poverty in the region and that discrimination against voucher holders is an impediment to fair housing choice. De-concentration of poverty using housing vouchers not only AFFH but improves the health and well being of families. A recent study by the U.S. Department of Housing and Urban Development published in the New England Journal of Medicine looked at the long-term health impacts of very low income families living in public housing in high poverty neighborhoods, including Baltimore. Among the studies key findings were that women who had the opportunity to move with a housing voucher from a high-poverty area to a low-poverty area were significantly less likely to be extremely obese or to have diabetes.

---

In addition, poor voucher success rates in both Baltimore and Anne Arundel Counties show the pervasiveness of discrimination against voucher holders. HUD has reported to advocates that in early 2011 the success rate in Baltimore County was a mere 33%, meaning that two-thirds of families that receive vouchers in Baltimore County cannot use them. Anne Arundel County’s success rate is also troubling at 60%. It is critical that all the local jurisdictions in the region take immediate action to support passage of the Maryland Home Act which is currently pending before the 2012 Maryland General Assembly. Jurisdictions should not wait until the formalities of the AI approval process are complete before offering support for the Maryland Home Act as it will preclude much needed efforts during the current General Assembly session.

Further, we support the AI’s finding that the State’s local approval and local contribution requirement for the Low Income Housing Tax Credit program is an impediment to fair housing choice and increases the likelihood that tax credit projects are rejected in high opportunity areas. The detrimental effects of this requirement are particularly evident in Baltimore County where tax credit developments must be approved by the individual County Council member in whose district the project will be located. This has resulted in the development of tax credit projects in Baltimore County that exclusively serve seniors citizens who are more politically palatable and predominately white. Regardless of whether the State changes its local approval or local contribution requirements, the local jurisdictions should take immediate action to increase development of tax credit projects for families in high opportunity areas by identifying potential developers for said projects and providing the required local approval and contribution.

Thank you for the opportunity to comment and we look forward to an ongoing collaborative effort in the region toward achieving fair housing choice for all.

Sincerely,

Carolyn Johnson

Re: Analysis of Impediments

Dear Ms. Wilkinson:

On behalf of the Maryland Disability Law Center (MDLC), the protection and advocacy (P&A) agency for the State of Maryland, thank you for this opportunity to comment and offer recommendations on the County and Regional Analysis of Impediments. Over the years, we have become increasingly concerned at the growing need for safe, decent, affordable and accessible housing for extremely low income Marylanders with disabilities. While the County and Regional AI move us significantly closer to a comprehensive analysis of the current barriers and impediments to Fair Housing both in the County and in the region, we note areas of needed improvement and urge greater emphasis on a strong plan of implementation. We offer the following specific comments:

a. Gaps in AI: persons who are homeless; persons in institutions; persons who need accessible housing or housing with accessible features

While the AI provides an examination of impediments to fair housing in the Baltimore region, it is not without gaps. In particular, the AI fails to examine the fair housing impediments for persons experiencing homelessness. Approximately 42.8 percent of sheltered homeless adults have a disability. U.S. Dep’t Hous. & Urban Dev., The 2008 Annual Homeless Assessment Report to Congress 27 (2009). There are numerous impediments to the use of shelters and other housing by homeless persons with disabilities, which have not been analyzed or identified in the AI.

Another gap is that the AI totally fails to consider people with disabilities, a protected class, who are living in institutions. As civil rights law and health policy both recognize that persons should no longer be forced to live in institutions in order to receive health care, housing for this population is relevant to the jurisdictional need. There are approximately 24,000 Marylanders in nursing facilities. The Department of Health and Mental Hygiene, Department of Disabilities and the Office on Aging are invested in keeping people with disabilities in the community and in getting persons in nursing facilities out of such placements and back into the community when it is safe and the preferred choice of the individual. The AI should consider the data and efforts from these state agencies and identify gaps in housing for people in assisted living or nursing facilities who need housing to return to community living.

The regional AI also cites the need for additional research to define the unmet need for accessible and visitable housing. Mullin & Lonergan Assoc., Inc., *Analysis of Impediments to Fair Housing Choice: Regional Section 72* (2011). The Baltimore City AI conceded that there is an acute need for accessible and affordable rental housing, but does not identify or project the gap in accessible, affordable housing for persons with disabilities. The AI should identify the number of persons in nursing facilities and in HABC housing programs or on its waiting list who need accessible units and units with accessible features and also considering the percent of the population that may need such housing given the high number of persons with disabilities in the City.

**b. The draft AI does not contain a clear action plan as intended by HUD.**

While Baltimore City’s preparation of an analysis of impediments to fair housing choice is an important first step to fulfilling its obligation to affirmatively furthering fair housing (AFFH), it is not sufficient. Rather, the AI is part of a process where Baltimore City also must “take appropriate actions to overcome the effects of any impediments identified through that analysis, and maintain records reflecting the analysis and actions in this regard.” 24 C.F.R § 91.225.

HUD developed a Fair Housing Planning Guide to assist jurisdictions in planning and fulfilling their fair housing requirements. Memorandum from Nelson R. Bregan, Gen. Deputy Assistant Sec’y, Cmty. Planning & Dev., & Carolyn Peoples, Assistant Sec’y for Fair Hous. & Equal Opportunity 1 (Sept. 2, 2004). In this guide, HUD states that when jurisdictions take “appropriate actions to overcome the effects of any impediments identified,” they do so by organizing “these actions into a prioritized list of specific actions.” U.S. Dep’t Hous. & Urban Dev., *Fair Housing Planning Guide* 2-6 (1996) [hereinafter *FHP Guide*]. This list would include milestones, timetables, and measurable results. *Id.* HUD also expects jurisdictions to establish a structure to oversee implementation of actions to overcome the identified impediments. *Id.* at 2-16. HUD expects jurisdictions to take its recommendations in the FHP Guide seriously and considers the achievement of measurable results the basis of successful fair housing planning. *Id.* at 1-5. It is clear from HUD’s Fair Housing Planning guidebook that a jurisdiction’s certification that it will “take appropriate actions to overcome the effects of any impediments identified through that analysis” includes detailed and specific planning. *See, FHP Guide* at 2-6.

The Fair Housing Action Plan outlined in the AI does not identify proposed actions with specificity and fails to detail milestones, timetables and measurable results for intended actions. MDLC strongly encourages Baltimore City to engage in planning that includes measurable goals and timetables and that more definitively responds to the impediments identified in the AI.

**c. The Steps Outlined in the Fair Housing Action Plan Are Inadequate to AFFH**

The Fair Housing Action Plan (Action Plan) fails to develop detailed milestones or measurable results, as noted above, and is too narrowly designed to address the identified impediments to fair housing and obtain the results MDLC believes are necessary given the City’s past and current practices.

For example, the Action Plan Goal related to increasing the supply of affordable housing in areas of opportunity has only one task—to create affordable housing though a number of strategies, including the Vacant to Value, neighborhood reinvestment projects and the inclusionary housing ordinance. This identified task does not address the specific impediments identified in the AI.
which have limited the supply of affordable and accessible housing and that have limited such housing to areas that are racially concentrated. Nor does the task identify how units will be created or how many units are anticipated to be created.

Similarly, the identified goal of expanding the availability of housing options for persons with disabilities is also narrowly defined and inadequate to AFFH. First, the goal only focuses on persons needing accessible units and ignores the needs of other persons with disabilities despite the significance presence of this population in the jurisdiction and HABC’s past history of discriminatory conduct. Second, the task “to develop strategies for creating [accessible] units to meet the need” begs the question of the purpose of creating an “Fair Housing Implementation Plan,” which is supposed to identify necessary actions to AFFH, not identify that strategies are needed. The AI affects the jurisdiction need for accessible housing and not simply the HABC properties, as the Plan indicates.

In sum, the Action Plan is described too narrowly and too generally to qualify as an Action Plan that overcomes the effects of identified impediments. In addition, MDLC agrees with the statement in the AI that a collaborative initiative among Baltimore and its surrounding metropolitan counties is needed to affirmatively furthering fair housing. However, no such initiatives are identified in the Fair Housing Implementation Plan. MDLC believes such actions should be included in the Action Plan.

d. MDLC recommendations to Action Plan.

MDLC recommends that the City revise the Fair Housing Action Plan to:

1. Identify the federal and non-federal resources that will be directed to increase the supply of affordable and accessible housing outside of racially concentrated areas.
2. Identify the number of affordable and accessible, affordable units that are proposed to be created and the number proposed to be created outside of racially concentrated areas.
3. Identify strategies to overcome the identified barriers that impede development of affordable rental housing for families with disabilities and other low income families in areas of higher opportunity.
4. Identify methods for incorporating visitability or universal design standards as discussed in the AI.
5. Prevent continued loss of subsidized, multi-family rental housing and to ban use of City resources that contribute to such loss without developing replacement housing.
6. Identify particular changes to the Housing Choice Voucher Program so that low income families and families with disabilities are able to use vouchers in areas of high opportunity including use of mobility counseling and programs like the Enhanced Leasing Assistance program operated by IHI.
7. Identify particular changes to the Housing Choice Voucher Program so that low income families with disabilities can locate accessible housing and housing with needed accessible features.
8. Identify initiatives it will attempt with surrounding jurisdictions to AFFH.
9. Identify strategies it will use that are not dedicated exclusively for Bailey or Thompson to increase affordable and accessible housing.
10. Adopt a local ordinance prohibiting landlords from discriminating based on source of income.
We would be happy to discuss our comments further with you at your convenience.

Ms. Amy Wilkinson
Baltimore Housing
417 E. Fayette Street, Suite 1316
Baltimore, MD 21202

Dear Ms. Wilkinson,

I strongly believe that there is a need for affordable, accessible, quality housing for people with disabilities throughout the City of Baltimore.

I work for Main Street Housing, Inc., a non-profit organization that has been providing affordable, quality housing to individuals and families with psychiatric disabilities for over ten years. Every week, I receive calls from people with psychiatric disabilities who are desperately seeking affordable housing within Baltimore City. Some of these individuals are in housing situations where they can simply no longer afford to pay rent and basic necessities on a limited income. However, the vast majority of calls I receive are from individuals who are homeless. Some are bouncing around relatives’ houses, continually migrating when their presence once again becomes unwelcome. Others are in shelters or various temporary housing situations. The common thread throughout all of these stories is an immediate, pressing need for a resource that is largely unavailable.

Housing is a basic need. Not only does a home provide protection from the elements, it also provides its inhabitants with a sense of stability and security. Without the consistent, quality housing, it becomes extremely difficult for any individual to work, get an education, or do other necessary things to live a productive life. This is particularly true for individuals with psychiatric disabilities. The already arduous journey for a person trying to successfully navigate the public mental health system becomes exponentially more difficult without housing. The consequences — be them hospitalization, incarceration, or other — are all costly to the individual, as well as to the state. According to the 2000 Census, over a quarter of Baltimore residents are living with at least one type of disability. Providing decent, accessible housing to people with disabilities is not only empowering the individual, it is preempting a tremendous financial burden.

I urge all relevant parties to prioritize the housing needs of individuals living with a disability in the state of Maryland.

Sincerely,

Kaillin Brennan

Re: Comments of the Maryland Multi-Housing Association
     Regional Analysis of Impediments to Fair Housing Reports

Dear Ms. Wilkinson;

The Maryland Multi-Housing Association, Inc. (MMHA) is a professional non-profit trade association established in October 1996 and represents over 85 Owners and Managers of 136,000 residential rental units in the State of Maryland. MMHA endeavors to maintain and promote the highest professional standards of excellence and advocate sound business practices that best serve the community and the multi-family housing industry. MMHA is an affiliate of the National Apartment Association (NAA), the largest national trade association dedicated exclusively to serving the multi-housing industry.

MMHA’s position is that the Regional and Local Analysis is incomplete because no nongovernmental rental housing providers were consulted during the study or were they provided an opportunity for input. In all of the voluminous materials provided in the various AI reports there are references such as:

- “Female headed households with children often experience difficulty in obtaining housing [because of]…the reluctance of some landlords to rent their units to families with children” See pg 18, Baltimore Metro Area City of Baltimore AI.
- “The City of Baltimore is served by the Greater Baltimore Board of Realtors (GBBR)” See pg. 114 Baltimore Metro Area, City of Baltimore AI
- “Sales and Rental Practices: The jurisdictions reported “little knowledge” of discrimination in this area…” See, Pg 64 Baltimore Metro Area AI
• "Fair Housing training as a component of real estate agent continuing education is lacking." See pg. 72 Baltimore Metro Area AI

For over 15 years the Baltimore Metro area has been served by several professional organizations representing private rental housing providers including the Maryland Multi Housing Association, The Property Owners Association of Greater Baltimore and the Institute of Real Estate Management. MMHA sponsors many professional education programs including Fair Housing and Rental Practices and Best Practices seminars for its members and their employees. The other organizations do the same.

Members of all of these organizations serve on Boards, Task Forces and other governmental and community housing services boards and study groups and provide vital services to both government and their communities.

The lack of contact with any of these groups in the preparation of these studies demonstrates bias in research and shows a glaring lack of appreciation for the local housing market and the housing providers serving it. In our opinion it makes the studies and any recommendations from them flawed, lacking in credibility and subject to serious question.

MMHA is willing to discuss any matters related to this at your convenience.

Sincerely;

Katherine Kelly Howard, Esq.
Legislative Committee Chair

Baltimore, Maryland 21202

Re: Comments on the Draft Analyses of Impediments to Fair Housing for the Baltimore Region and for Anne Arundel County, Baltimore City, Baltimore County, Harford County and Howard County

Dear Ms. Wilkinson and Members of the Work Group:

On behalf of the ACLU of Maryland, I write to submit comments on the draft Baltimore Regional Analysis of Impediments to Fair Housing (AI) and the similar draft AIs published for public comment by Baltimore City and the Urban Counties of Anne Arundel, Baltimore, Harford and Howard counties. We are generally pleased to see that the entitlement jurisdictions in the Baltimore Region have, at long last, performed the Analyses of Impediments to Fair Housing required by federal law.

The draft AIs represent a good start toward correcting this non-compliance, and we hope that the jurisdictions will move expeditiously toward adoption of the final AIs. But analysis and identification of impediments, while necessary, is not sufficient basis for a certification that the grantee will affirmatively further fair housing. The AIs must include well designed and adequately resourced action plans and the jurisdictions must follow up with action to implement them. We are hopeful that this process will start our region on a new path toward inclusion, equity and shared prosperity.

We offer the following overarching summary of our assessment of the draft AIs:

- **Overall, the analysis in each AI represents a credible and reasonably thorough review of many of the most salient barriers to fair housing in the metropolitan region and individual jurisdictions.** Although there are some gaps in the analysis, the consultants performed a professional job, and clearly heard and recorded a common story about our region’s longstanding and current fair housing challenges. We generally agree with the findings and recommended actions, and appreciate the effort that went into the production of the Al’s.

- **The findings of impediments could be improved to more closely and accurately track the analysis and description of fair housing barriers.** In a number of cases, impediments that have been well described in the analysis are noted only as “observations” rather than identified as “impediments.” For example, in each of the jurisdiction-specific AIs, conditions of segregation, which are clear impediments to fair housing, are listed only as “observations.”
addition, impediments found in the 1996 AI, that clearly continue to exist as shown in the current analysis, should be identified as on-going impediments.

- **Across the board, the action plans are in need of improvement before the documents are finalized.** As currently drafted, the recommended actions fail to meaningfully address many of the impediments and conditions described in the analysis. To the extent that actions are described at all, the descriptions are very general. In each case, they should, but do not, tie back to the jurisdiction(s) Consolidated Plan and Public Housing Agency (PHA) or Moving to Work (MTW) Plans. The AIs must, therefore, be revised to include action plans that address each of the identified impediments, with a specific plan that sets forth time tables for implementation, milestones and targeted resources. "The sole measure of success for Fair Housing Planning (FHP) is the achievement of results."

**Analyses of Impediments:** As noted above, the basic format and methodology used by the consultants to analyze impediments in each of the entitlement jurisdictions and the region as a whole is sound. A comprehensive analysis of all five jurisdiction-specific AIs and the Regional AI is beyond the scope of these comments. However, we will to highlight some specific issues that are relevant to the Regional AI and common to all grantees' individual AIs. Our focus is on impediments to fair housing that limit opportunities for racial minorities, and especially minority households with children.

- **The Baltimore region continues to be racially segregated.** Moreover, the AI finds that in every jurisdiction, areas of minority concentration are closely aligned with low opportunity, low-income areas. In other words, separate is not equal in the Baltimore region. However, segregation is noted throughout as an "Observation" and not as an identified "Impediment." It is difficult to conceive of a condition that more directly restricts housing choice, and thus should be identified as an impediment. The AI should specifically propose ways to address residential segregation. The Fair Housing Act requires that HUD grantees, together with HUD, must use their "immense leverage" to "further integrated and balanced living patterns."

- **Segregated housing patterns in the region are reinforced by the concentration of affordable housing in areas of minority and poverty concentration.** This finding echoes the impediment found in the 1996 Regional AI that public and assisted housing in the region is racially segregated. However, segregation of public and assisted housing is not explicitly identified as an impediment in any of the AIs. Every AI notes that public and assisted housing is concentrated in minority and low income communities, not just in Baltimore City but in the suburban jurisdictions. The jurisdictions should look for opportunities to address the underrepresentation of minority residents in some parts of the region in a way that also addresses the concentration of affordable housing in minority communities. One way to accomplish this is through a housing mobility program. As the Regional AI notes, the Thompson Mobility Program has been successful in helping families move from segregated areas that are often Section 8 submarkets, to more integrated communities that are also safer and offer better schools and opportunities. The entitlement

---

2 *NAACP v. Sec'y of Hous. & Urban Dev.,* 817 F.2d 149, 156 (1st Cir. 1987) (stating that Title VIII imposes a duty on HUD beyond simply refraining from discrimination).
jurisdictions and their PHAs could build on this success by extending mobility counseling services to their own regular Housing Choice Voucher programs.

- **The individual and regional AIs rightly focus on government-imposed barriers to the production of affordable housing in non-segregated, higher opportunity areas.** These include local zoning barriers, the state’s local approval requirement, and requirements imposed by the jurisdictions on affordable housing developers that are not imposed on other types of development. Examples include Anne Arundel County’s lack of zoning for multi-family housing in the high opportunity and centrally located Ritchie Highway corridor, Baltimore County’s requirement that project sponsors obtain the approval of local elected officials representing a site, and Baltimore City’s NOFA process that imposes a barrier on applicants for state funds, in addition to locally controlled funds. The AIs should propose specific actions to address the locally imposed barriers, while working together to support elimination of the state’s local approval requirement.

- **Each of the AIs call for the grantees to prioritize development of affordable family housing in higher opportunity areas.** This does not mean that the grantees should curtail investments in minority and low income areas. To the contrary, it will focus investment in the areas away from low-income housing (which they already have) to the type of investments that they most need. This includes new or improved school facilities, recreation centers, workforce development, retail services and small business, and better transit connections to regional economic centers.

- **The AIs correctly highlight the unmet need for housing for families with children and the small percentage of rental units in each jurisdiction with three or more bedrooms, and contrast this with the large percentage of family-sized homes with three or more bedrooms.** This disparate approach to the funding, zoning, permitting and construction of rental housing for families with children is the product of both private and government action. It severely limits the housing options of families with children, and also falls disproportionately on racial and ethnic minorities and women. The AIs should, but generally do not, include specific actions designed to increase the number of three bedroom or larger rental units. The development of multi-family housing is not the only way to achieve this objective. The current market conditions present a very opportune time for the grantees to implement strategies to acquire, at reasonable prices, scattered site homes (whether townhouses or detached) from the excessive inventory of homes for sale that is clogging the market. Here again, the region could build upon models developed during the implementation of the Thompson programs.

- **The pace of demolition of family public housing units in Baltimore City has far outstripped efforts to develop replacement housing and merits regional solutions.** The AI correctly describes the dearth of public and deep-subsidy assisted housing in the region outside of Baltimore City, and the reliance of the suburban counties on the City’s affordable housing stock to serve the low-income housing needs of the entire region. The loss of this housing resource through Baltimore City’s demolition efforts is, therefore, of regional significance. Recently, Howard County has begun to partner with the Housing Authority of Baltimore City and its contractors on some development projects, with mutual benefits for both jurisdictions and the low-income families of the region. These initial steps should be expanded throughout the region.
• The Section 8 Housing Choice Voucher Program continues to operate in a fragmented manner, with a constellation of impediments to housing choice that cause concentrations of voucher holders. These same impediments were found in 1996, and were the subject of the Regional Fair Housing Working Group’s 2002 Fair Housing Action Plan. Unfortunately, the actions outlined in that plan were not very robust, and few aspects of the Plan were ever implemented. As a result, the AI finds that the HCV program is not living up to its potential to deconcentrate poverty and expand fair housing choice. In fact, a recent Brookings Institute study found that the share of HCV recipients living in the suburbs has actually declined more than 12% from 2000-2008, counter to the national trend of increasing suburbanization of voucher households.3 The AI does not examine the specific reasons for this decline, but nonetheless found a variety of barriers at work. As recommended in the AI, it is time that the PHAs in the region address this issue, with the assistance of the jurisdictions. Mobility counseling, as a result of the Thompson v. HUD Partial Consent Decree, has been implemented at scale in the Baltimore region and has been successful in helping families move to communities that provide better opportunities for housing, jobs, schools and other services. Similar programs can and should be implemented by the regional PHAs — preferably at a regional level but at least at the local level. The jurisdictions should provide CDBG funds to help offset the costs. As recommended in 2002, the PHAs should also increase payment standards, request HUD approval of exception payment standards, standardize procedures, and foster agreements with neighboring PHAs to encourage mobility and streamline portability.

• The lack of an infrastructure for regional cooperation and joint efforts on affordable and fair housing is itself an impediment to fair housing. As the AI aptly states, “[N]o system exists for implementation of meaningful regional fair housing solutions.” (Regional AI, p. 5). In the absence of such a system, local actions are, at best, fragmented and generally ineffective. The recent successful application for a Sustainable Communities Initiative (SCI) planning grant is an encouraging first step toward regional planning and action. We are encouraged by the effort that went into procuring the grant, and the budgeting of funds for implementation of a regional action plan to address impediments identified in the AIs. Only time will tell whether the Baltimore Region makes the most of this opportunity, but there are models around the country for regional affordable housing strategies that could be adopted here. In the Chicago region, for example, PHAs have pooled some of their project-based vouchers to create a regional housing development initiative.

Gaps in the Analyses of Impediments: There are several areas that received only a cursory examination in the AIs, or were not examined at all. We discuss several gaps in the analyses below.

• Loss of HUD assisted multi-family housing: The loss of privately-owned HUD assisted housing units through a variety of mechanisms, including pre-payment, opt-outs, and demolition does not get the same level of attention as does the loss of public housing and the shrinking supply of unassisted low rent units. For example, there is little, if any, mention of the significant loss of HUD assisted housing in Anne Arundel County’s AI, nor is there an analysis in the Baltimore County AI of the County’s demolition, without replacement, of nearly 4,000 HUD assisted units. The Regional AI does note, but without further anlaysis, the loss of

---

5,356 Section 236 units, or a staggering 65% of the stock of such units in the Baltimore region. The assumption seems to be that the lost multifamily units were mostly substandard or uninhabitable, or that their loss has been offset by subsequent LIHTC production. These assumptions are not necessarily correct. Regardless, the loss of assisted multifamily units, especially in suburban counties that have no public housing, presents clear civil rights risks. The AIs should analyze the loss of units, including the impact on occupants (by race and family type), location, and supply, and the jurisdictions’ policies and priorities for preservation of assisted housing.

- **Impact of Housing Policies on Educational Opportunity and Levels of School Segregation.** The Federal Fair Housing Act requires that HUD and its grantees consider the racial composition of neighborhoods and their schools when siting low income family housing. As a part of this obligation, the AIs should include data on the racial makeup of public schools in the discussion of impediments to fair housing. In addition, because the siting of affordable housing largely determines the schools that children who live in the units will attend, it is often said that “Housing policy is school policy” and that educational opportunities are determined by a child’s zip code. The AI should analyze data regarding school performance, percentage of children receiving free and reduced meals (FARM rates) and racial demographics of schools served by existing affordable housing. To guide the expansion of housing in areas of high educational opportunity, the AIs should identify low poverty schools that perform above the state average, and prioritize use of federal housing resources to develop affordable family housing in locations served by those schools.

- **Health and Environmental Justice:** There is growing public health documentation of the health risks associated with high poverty, racially isolated neighborhoods. Geography serves as a primary means of concentrating and perpetuating disadvantage in our society, and patterns of government-supported racial and economic segregation constitute a leading cause of minority health disparities. Leading public health scholars recognize that neighborhoods play a crucial role in determining health outcomes. Moreover, research has shown significant improvements in obesity, diabetes, and mental health for women and children moving from high poverty to low poverty neighborhoods. The AI should include some analysis of the readily available data on racial and spatial disparities

---

4 For example, Figure 3-5 in the Baltimore County AI shows an increase in LIHTC of 70.5% from 2000-2008, coupled with a reduction in Section 236 units of 67.7%. However, an increase in elderly LIHTC units would not offset a loss of family Section 236 units. In other respects, the data in the table look questionable. It is unlikely that a reduction in project-based Section 8 projects from 21 to 12 would result in a loss of only 9 units.

in health outcomes that characterize the Baltimore region.\textsuperscript{8} Housing investments should be prioritized toward expanding housing opportunities, especially for minority families with children, in neighborhoods that are conducive to better health outcomes and lower health care costs.

- \textbf{Transportation Policies:} The Regional AI correctly recognized the barriers to fair housing posed by the weaknesses in the region’s public transportation system. These barriers contribute to the concentrations of poverty in the region, not just in Baltimore City, but in the suburban counties as well. Although the MTA is a state agency, decisions regarding transportation policies and public investments in transit are influenced most by the jurisdictions in the region. The Metropolitan Planning Organization (MPO) for the region is largely comprised of the chief elected officials of the counties and the cities of Annapolis and Baltimore. In addition, the suburban counties all operate local fixed route transit systems. The Regional AI notes, “The pattern of areas served and unserved suggests that the process is not without political influence.” (Regional AI at p. 70). The pattern also has clear consequences for determining where transit-dependent citizens, who are disproportionately members of protected classes, can live and work. Changes in the pattern of service could open up new housing opportunities for minorities and other protected classes. The AIs of the individual grantees all lacked an analysis of the linkages between transportation, land use, and housing policy, as well as the effects of those policies on segregation and fair housing choice.

\textbf{Identification of Impediments and Action Plans:} In spite of the largely positive direction of the Analyses of Impediments, we were disappointed in the “Implementation Plan” attached to each in the form of a very rudimentary matrix. There is little to distinguish these new AIs and Implementation Plans from the 1996 AI and 2002 Regional Fair Housing Action Plan, neither of which resulted in actual action or measurable outcomes.

- \textbf{The AIs identify only “potential” impediments to fair housing.} The AIs should reflect the finding of impediments, not “potential impediments.” It is not clear what distinction the grantees intend to draw between impediments and “potential impediments,” but HUD’s Fair Housing Planning Guide calls for grantees to identify impediments.

- \textbf{The jurisdiction-specific AIs all lack well defined actions, goals, benchmarks, timetables, and measurable results, and some even failed to identify the agencies responsible for specific tasks.} In this respect, the Implementation Plans did not appear to be plans or strategies that could actually be implemented. Some common elements that should appear as part of any action plan should include: well-defined tasks leading to measurable outcomes, assignment of the people or offices to be given responsibility for completion of tasks, benchmarks and timetables, estimates of the resources necessary; and ideally, a procedure for

\textsuperscript{8} See Community Health Rankings showing Howard County ranked number one in both health factors and health outcomes among Maryland jurisdictions, with Baltimore City ranked 24th. See http://www.countyhealthrankings.org/maryland/overall-rankings. Even within Baltimore City, there are wide disparities in mortality and morbidity by race and neighborhood, after controlling for individual factors. See http://www.baltimorehealth.org/info/2010_05_25_HDR-FINAL.pdf.
periodic evaluation to assess whether the goals have been achieved, and what needs improvement or change.

- **The Regional Fair Housing Action Plan is completely lacking timetables or the identification of responsible parties.** Responsibility for addressing the identified impediments is left completely diffuse. The identified impediments and recommended actions, should be included in the Implementation Plans for each of the jurisdictions. Timelines and deliverables should be provided, and resources quantified and identified.

- **The linkage between the identified impediments, recommended actions and Implementation Plans are not as clear or direct as they should be.** In some cases, recommended actions are not included in the Implementation Plans. In other cases, the steps listed in the Implementation Plans do not appear to be well tailored to effectively address the identified impediments.

- **It is not made clear whether or how the Implementation Plans will be incorporated in each jurisdiction’s Consolidated Plan and Annual Action Plan, and PHA/MTW Plan.** Due to the delay in issuing the AIs, some of the jurisdictions have already completed their Con Plans, and thus the Plans were not informed by the AIs. The jurisdictions should rewrite their Con Plans to incorporate the data, analyses, identification of impediments, and implementation steps contained in the new AIs, and should reassess their priorities to take into consideration the findings of the AIs.

Thank you for the opportunity to comment on the new Analyses of Impediments. We anticipate that this is actually the beginning of a process, and that the Action and Implementation Plans will be further designed through the Sustainable Communities Initiative planning process. We are ready and willing to assist the jurisdictions and the regional Fair Housing Working Group in any way that would be useful.

Yours very truly,
